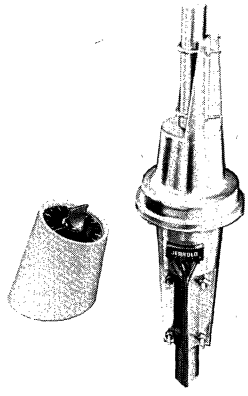
DYNA ○ ROTOR™



The new Jerrold Dyna-Rotor is a revolutionary breakthrough in antenna rotator design, featuring a totally solid-state control circuit and a unique Dynamic Spline drive mechanism. The Dyna-Rotor is completely automatic — just set the control knob to the desired direction, and the antenna turns to the exact selected position — quickly, precisely. Antenna is synchronized with the control at all times; no re-synchronizing ever required. Positive mechanical lock prevents antenna from drifting off selected position, even in high winds. Fastest rotator available, the Dyna-Rotor turns the largest antennas a full 360° in less than 40 seconds. Control unit is attractively styled and completely silent in operation. Dial light indicates antenna is turning. In-line rotor cannot be jammed by ice loading; operates reliably at —20°F.

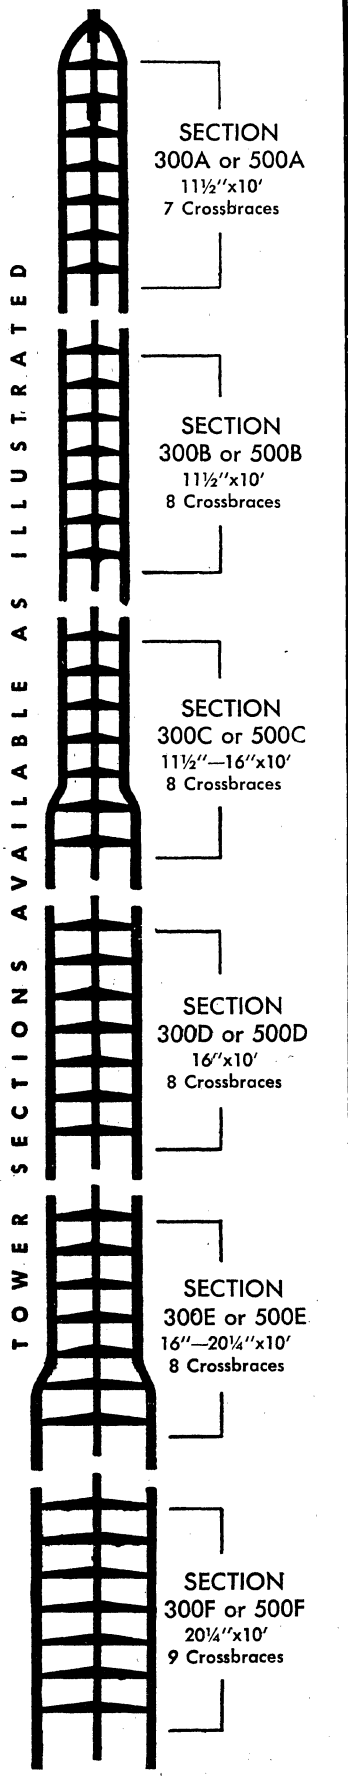
TOWERS

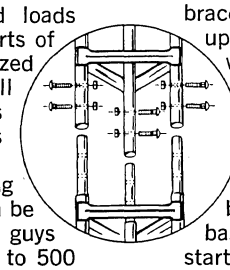
SELF-SUPPORTING UP TO 60 FEET HIGH
HOT DIP GALVANIZED HEAVY DUTY MODELS
ZINC ELECTROPLATED ECONOMY MODELS
NO LOST TOWER FOOTAGE
FAST, EASY SECTIONAL ERECTING



With these two Jontz Tower models you can fill any tower needs . . . from small suburban to heavy-duty commercial installations. Sectional construction and special drive-in bases make erection fast and simple. The Zinc Electroplated Economy Model No. 300 will easily withstand high wind loads normally encountered in most parts of the country. The Hot Dip Galvanized Heavy Duty Model No. 500 will withstand hurricane force winds having been tested at wind loads of 80 mph.

Model No. 500 is self-supporting up to 60 feet high. Model 300 can be extended to 200 ft. by use of guys every 20 feet and Model 500 up to 500 ft. by use of guys every 20 feet. There is no lost tower footage when mounting in either concrete or the special drive-in base. Since the tower is separate from the base, it may be moved to another location without impairing strength.

Both towers are fabricated in 10'0" sections and can be erected in one piece or by sections. Model 300 is made from 1¼"x18 ga. tubular uprights and is zinc electroplated and dipped in clear Butyrate lacquer. The Model 500 is made from 1¼" x 16 ga. tubular uprights and is hot dip galvanized.



New, extra-wide corrugated crossbraces give 75% more weld contact with uprights. Tower sections lock together with 2 self-locking ⅜" bolts in each leg. The splined bolts prevent thread damage and stop hole stretch when tower moves in the wind.

HOW TO ORDER: 1. Specify if to be mounted in concrete or drive-in base. 2. Order by specific sections, starting at the base. See illustration for section numbers.

SHIPPING: For best freight rates, 40 ft. and over towers will be shipped in section combinations permitting 2 telescoped bundles, unless otherwise specified. (Example: a 60 ft. tower will consist of section A, C, D, E, and 2 F's.)

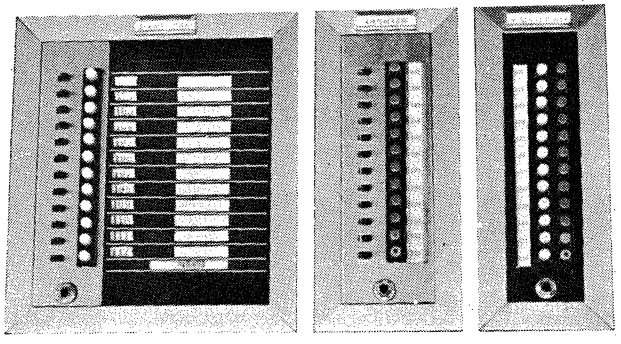
Front Desk **Cashier** **Floor**



THESE SYSTEMS ARE PROTECTED BY U. S. PATENTS 3,214,747 and 3,230,520

Model 2L — 2 Lights, 2 Switches per Room
Two lights, green for room available and red for checkout on consoles for front desk and housekeeper. Switches are on front desk board only, and not on housekeeper's board.

When guest checks in, desk moves switch putting out green light. No lights indicate occupied or rented room. When guest checks out, the room clerk throws other switch, putting on red light on his console and red light on housekeeper's board and a small light appears on the guest room panel.

When the maid enters the room, the light on the guest room panel indicates a checkout to her. She pushes in her signal plug to indicate she is working that room. This causes red light on front desk and housekeeper's consoles to blink. When maid is through with room she pushes her plug all the way in and removes it. This puts out all lights and turns on the green lights to indicate room is ready for sale.

Note: Once the maid enters the room and pushes in her plug, either or both the front desk and the housekeeper can give her verbal instructions in regard to the room. Two-way communication is available but not recommended.

NEW, MAID AND INSPECTRESS ROOM STATUS SYSTEM, Model 2LMI

This is a new light system that is equivalent to American's standard 4 light system. It not only shows when a room is ready for sale, occupied or a check out, but also the status of a room when it is being cleaned or inspected. Front desk has one green light and switch per room, cashier has one red light and switch per room. These two boards can be combined for front desk operation. A combination information board with red and green lights for each room, but no switches is at the housekeeper's station, and for the inspectress, there are boards for each floor with a red and green light for every room on the floor.

OPERATION

When a guest checks out, cashier throws switch for the room, lighting red light on her board, also on housekeeper's board, and on floor board as information for inspectress and maid, and a small light on status plate in check out room. When maid sees this light on entering the room she immediately knows it is a check out. She pushes her plug into the maid jack on the room plate. This causes red lights to dim, for the room involved. At this time, the cashier, or housekeeper can give verbal instructions to the maid (one way communication). When maid is through, she removes her plug and all the lights for the room begin to blink, indicating that room has been cleaned.

Inspectress enters and checks the room. If it is acceptable, she pushes her plug into the maid's jack and removes it, causing the small light on the room panel and the red lights on the other boards to stop blinking and to burn steady. Upon seeing the small light on the room panel burn steady, the inspectress knows the room is a checkout. She pushes her plug into her jack on the room panel, causing the room plate light and the red lights on the other boards to go out, while at the same time lighting the green light on the front desk. Front desk now knows he has a room for rental.

Single Light Maid Status System

Maid Call System "MC" is the use of the white light or maid's control light of Status Control System 4L as an independent, separate system. This system may be installed alone, and functions to notify the Front Office or Housekeeper when the room has been completed.

Operation:

(1) On Check Out, Room Clerk turns on light on Guest Room Panel.
(2) Light indicates to Maid that room is Check Out.
(3) Light blinks at Front Office and/or Housekeeper's board when Maid inserts plug in room jack.
(4) Light goes off when Maid removes plug.
(5) Room Clerk now knows room is ready for Sale.

As with other systems, Front Office and Housekeeper are in direct communication (one way) with Maid in room.

SIGNAL MAIL RACK & MESSAGE-AT-DESK

REQUIRES ONLY ONE CONTROL WIRE PER GUEST ROOM

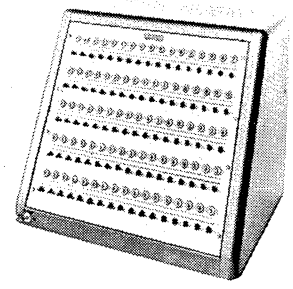
AMERICAN COMMUNICATIONS manufactures two signal systems, either of which may be used to expedite message and/or mail handling in hotels, motels, schools, factories, hospitals, and other institutions.

The **Mail (and Message) Rack Signal System** is comprised of numbered pockets, one for each room with a push button light switch, or light and switch for each pocket. Each pocket is wired to a guest-room. When clerk files mail (or message) in pocket, he lights corresponding lamp; simultaneously, a duplicate lamp in the guest room lights, and advises guest he has a message at main desk.

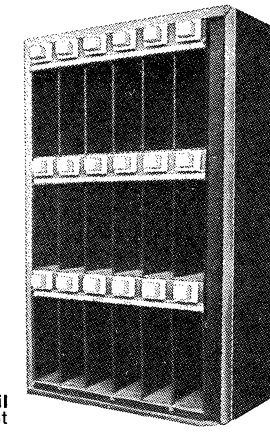
Long-life bayonet lamps in Signal Mail Racks and Message-at-Desk units are easily replaced from front.

A new **2-Way model, No. A-MR2,** with access from either side and lamps and switches on both, enables Mail Clerk to insert mail from one side and silently signal guest and for Telephone Operator to insert messages from the opposite side (and also signal the guest).

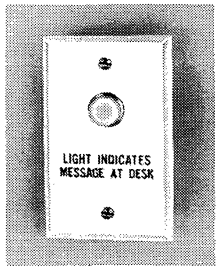
The **Message-at-Desk Unit** is identical with the Mail Rack System, except that there are no pockets — only push button light switches or lamps and switches mounted on a control panel. Message clerk — usually the telephone operator — signals to guest that there is a message (or mail) by moving a switch as above described. **Model A-MD1/85** (illus.), for example, is a desk-top model for 85 guest rooms.



No. A-MD1/85 Message-at-Desk unit, Desk-top type.



No. A-MR3/100 Mail & Message Rack, Key Slot (not shown) is available.



No. A-P20-3-A Signal Plate, in guest room, mounts on standard 1-gang outlet box.

The Racks and Panels are available in a variety of constructions to suit individual requirements as to location and number of rooms, and in standard or special finishes as decor dictates. The Mail Rack is available with key slots.

If guest room is not wired for radio, a separate wall plate, **A-P20-3-A,** is provided for the signal lamp; otherwise, it can be included on the radio control panel or the TV Remote Control Unit.

They may be made for Flush-wall (recessed), Surface-wall or Desk (table-top) mounting. An easily removable end cover plate permits access to wiring. Power Supply unit (included) is controlled by a switch.

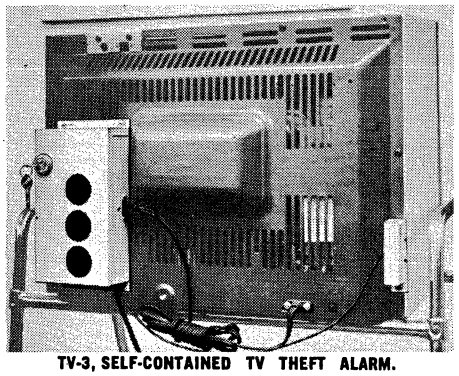
AMERICAN'S New TV-set THEFT ALARMS

Pending Patents.

A-TA-B/50 TV-set Theft Alarm for Hotels.



TV-3, SELF-CONTAINED TV THEFT ALARM.

AMERICAN'S TV-set Theft Alarm is now available in designs that meet the needs of occupancies of any size; in addition to the **Model B,** for hotels of 50 rooms or more, there is the new **Model C,** for motels of under 50 room units.

Both models operate to signal the front desk of any attempt to steal the television set it protects.

Installation may be made by any technician, following detailed instructions supplied with each System (Console, and Room Units). **Requires only one control wire per guest room.**

Operation: Equipment under protection (TV-set, appliance, etc.) is electronically protected. Any attempt to remove connection from wall outlet, or cut power cord, starts alarm signal. This signal is indicated at the Front Office as a flashing light, and loud buzz.

There is no alarm in the guest room to alert the thief, but the Front Office signal, once triggered, cannot be stopped until Front Office attendant has operated a Reset switch (which cancels buzz); a room indicator lamp remains lit, however, until house personnel has checked the guest room and restored the circuit to its normal alert condition.

Apartment House owners can now offer their tenants maximum security at negligible cost. Tenant is protected against an unlawful entry.

SPECIFICATIONS

No. A-TA-B/- TV-set Theft Alarm, including Front Office Control Console, complete w/room lights, loud-sounding buzzer, alarm light, flasher, alarm reset and power on-off switches, solid state devices, and power supply; and, Room Kit (Conversion Cord, Conversion Outlet, one each per room). Control Console (A-TA-B/50) measures approx. 15″ x 7¾″ x 9″ deep; wt., approx. 30 lbs.; finish, gray crackle enameled steel. Operates on 115 V., 60 cy. A-C. **Net Price, A-TA-B/-, $12.00/room.** Price is for a maximum of 50 rooms. Cable not included.

TV-3, SELF-CONTAINED TV THEFT ALARM. The TV-3 Theft Alarm mounts on the back of each TV set. Should anyone attempt to cut the power line, pull out the power plug or remove the Theft Alarm, an extremely shrill piercing alarm is set off. The alarm, which is audible throughout the entire building, will run for about an hour. Two options are available to the owner. Option 1 requires the management's presence to shut the alarm off. Option 2 — If the plug is re-inserted in the receptacle, the alarm will shut off by itself. This option allows for a test of the alarm.

The TV-3 is held in place by screws. No internal connections have to be made to the set. All that's required is to plug the TV set's power cord into the TV-3 and then plug the TV-3 into any power receptacle.

NOTE: If Power goes off, Alarm will not be set off.

INSTANTANEOUS OR SIMULTANEOUS INTERPRETATION & TRANSLATION SYSTEMS

These systems are used wherever foreign groups assemble for meetings, conventions or governmental business. The system is similar to that used at the United Nations and other international conference halls.

There are usually five languages spoken for the purpose of interpretation.

The system comprises:

1. The initial pickup of the person addressing the audience.
2. Simultaneous transmission to the interpreters through headsets.
3. Each of the five interpreters, in his own language, translates what the speaker has said simultaneously to each separate seat in the auditorium.
4. At each seat there is a special switching device and air conduction head sets for the occupant, allowing him to hear either original address or any of the five interpretations.
5. The switching unit is installed in the seat arm or in the case of a temporary installation, tied to the lower arm.
6. Whenever portable equipment is used, the wires from the switching device are plugged into a specially designed floor molding, that is placed directly under and through the seats.

The system consists of the following equipment:

The Interpreter's Box, Model IB	$135.00
Interpreter's Mixer-Amplifier, 25 W. solid state, Model IMA	160.00
Interpreter's Microphone, lavalier type, Model IM (not shown)	55.00
Seat Switching Unit, Model SSU	18.55
Air Conduction Headset, Model ACH	5.75
Molding Connection Box, built-in short circuit-proof networks, Model MCB	23.85
Special Wired Molding, lies flat on floor, with male and female plugs, 8 ft. section. Other lengths available (8 ft.)	12.50

The degree of reliability achieved through advanced, conservative solid-state design could not be realized with conventional tube amplifiers . . . so, Bogen created "CHS" . . . the popular-priced series of solid-state amplifiers to suit every p.a. need. Safe continuous operations from −20°C. (−4°F.) to +65°C. (149°F.).

Unique features: optional panel-mounted preamp. provides 2 additional mic. inputs • hi or lo imped. mic. inputs (no transformer required) • all solid-state (CHS100, CHS50 are all-silicon) • automatic wave-soldered printed circuit boards • AC/DC operation (12 v. battery) with CHS35, CHS20 • provision for mic. precedence and remote vol. control.

BOOSTER AMPLIFIERS

BOGEN SOUND SYSTEMS

Bogen's booster amplifiers embody the most advanced developments in design and techniques of construction. These units deliver maximum power from a small package. They are ideal for sound systems in industrial plants, airports, stadia, schools . . . wherever undistorted power is required. Note their exceptionally wide-range response characteristics. Built-in provision permits paralleling any number of power amplifiers to multiply power output. The models described on the preceding page are ideal preamplifiers for these boosters. The MO200A, MO100A, and MT100 units are unsurpassed for both PA and industrial uses. Their 115-volt output makes them adaptable to unique applications. With a variable frequency audio generator input, they represent relatively inexpensive power sources – any frequency or voltage – capable of driving servos, motors, vibration (shake) tables, ultrasonic equipment. The unique all-silicon transistor model MT100 may be operated from a 12-16 VDC source as well as from 117 VAC. Highly flexible in combination, inputs of identical amplifiers can be paralleled; outputs can be wired in series or parallel to provide any reasonable voltage or power (except MBT60 outputs).

No cage is furnished with MO200A.

TRANSISTORIZED POWER AMPLIFIERS

FEATURES:

- All silicon, solid state circuitry.
- Full automatic output circuit protection (with indicator light).
- Full bass and treble control.
- 4, 8 and 16 ohm output, bal. 25 & 70 V line.
- Available in package or rack mount.

GENERAL:

TPA Series amplifiers are heavy duty, full fidelity. Conservatively designed to meet the most extreme performance requirements within each power range. Special low-noise FET transistors in front end, and four feedback loops for super stable operation and low driving impedance. Rugged aluminum "beam" type chassis combines strength with light weight. Extremely efficient transistor design permits constant use with low power consumption.

OUTPUT CIRCUIT PROTECTION:

TPA Series amplifiers incorporate the exclusive, fully automatic Bell P/A sensor circuit which protects output transistors against overload or short circuit. Front panel amber light gives visual indication of any such condition. When condition is corrected, sensor circuit automatically and immediately restores amplifier to normal function. No manual reset or time delay required. This feature is invaluable when replacing amplifier in an old system where load and condition of wiring are not known, or in event of accidental shorting.

CONTROL FEATURES:

Full bass and treble controls, as well as master gain control on front panel permitting use of amplifier as power booster for tape playback, phonograph, tuner, or preamp. Two can be used for stereo systems. In a multifunction sound system, amplifiers can be adjusted to produce tonal quality required by each speaker array or to acoustical requirements of each particular area.

Input level to amplifier may be adjusted on rear panel to make unit compatible with nearly any program source.
Provision for a plug-in balanced 600 ohm input transformer makes this amplifier ideal for telephone paging systems or as a booster amplifier for paging with an intercom system.

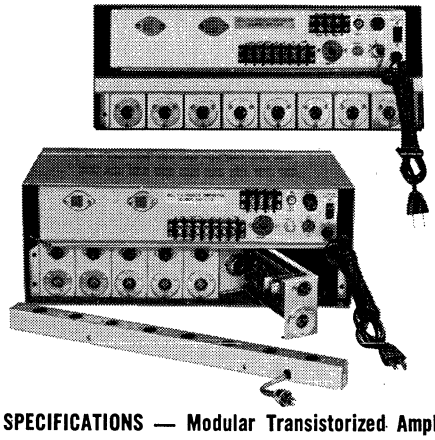
MOD SERIES
Models MOD-20 and MOD-45

MOD SERIES
Models MOD-90 and MOD-200



TRUE MODULAR AMPLIFIERS

FEATURES:

- 1 to 8 modular input preamps.
- Thousands of possible combinations.
- Hundreds of modular arrangements.
- Dozens of basic applications.

GENERAL:

The new Bell P/A MOD Series modular amplifiers incorporate the TPA Series in a unique package concept that makes possible a virtually unlimited number of applications. The new line provides unprecedented flexibility in modules. The new MOD amps are full fidelity, heavy duty construction, conservatively designed to meet the most extreme performance requirements within each power range. As in the TPA Series, Bell P/A's high standards of quality prevail throughout the new modular line.

INPUT MODULES:

Bell P/A MOD Series units are each equipped with one hi Z mic preamp (Model No. MMH-1) and one hi Z, high level, aux program preamp (Model No. PMH-1). Six other preamp modules* may be added, for a total of 8, to satisfy input requirements of nearly any installation. Modules are simple to install in field, requiring no special tools or wiring.

The "stacking" principle utilized in Bell P/A MOD Series permits unusual design flexibility. Channel 1 (to extreme right, facing front of unit) is base channel, and all input modules are stacked to left. Special control modules, such as "priority paging" or "limiter" module, may be placed in any channel so as to mute or limit the gain of all inputs to the left of its position. In this way, it is possible to control from one to all seven other inputs.

When designing a system, it is recommended that MOD xx Basic be special-ordered with required input configuration. Completed unit will be shipped from factory, ready to operate.

* Input modules can be supplied with any standard audio input connector, on special order. For complete information on input modules and specifications, see individual module spec sheets.

INVENTORY

While most distributors maintain a large and varied stock, they do not represent that they stock all manufacturers' products shown in this MASTER catalog.

NEWCOMB

PORTABLE PHONOGRAPHS & TRANSCRIPTION PLAYER / P.A. SYSTEMS

R&RT SERIES

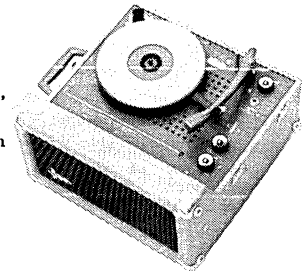
R SERIES ARE VACUUM TUBE MODELS, teaching tools of moderate cost and proven reliability. They are built for intensive usage with maximum reliability, optimum performance, and minimum maintenance; they include many convenience, performance, and safety features.

RUGGEDLY BUILT, both R and RT Series models have cases made of crack-proof, warp-proof, glue-blocked plywood covered with warm gray, washable, scratch-resistant vinyl. They are further protected with metal corners and kickproof, die-formed, perforated metal grilles and vent plates. Come-apart hinges obviate the most vulnerable part of case construction. Ready access for servicing is provided. Cases rest on spring-floated feet. All are transformer powered for maximum safety and best performance. All are UL approved. Made in the U.S.A. Handy bid specifications are available from the factory to authorized personnel. Condensed operating instructions in large type and clearly illustrated are plastic-coated and permanently mounted in lids. SPECIFICATIONS AND PRICES ARE SUBJECT TO CHANGE WITHOUT NOTICE.

RT SERIES MODELS WITH TRANSPECTRUM SOUND ARE FULLY TRANSISTORIZED. The purity and range of Transpectrum Sound is not only the result of using transistors properly in completely new and original circuitry, but more importantly it is the result of Newcomb interrelationship engineering — the precise matching and balancing of all parts of the system so that the performance of the whole machine exceeds what might be expected from summing up the contributions made by the various components. All RT phonographs are equipped with Newcomb's lighted Instant Stop-Pause-Go control, the finest instructional pause device on the market.

MODEL R-124

Monophonic Phonograph



The Newcomb Model R-124 high fidelity, transformer-powered phonograph is an extraordinary combination of ruggedness and high fidelity sound — in every respect an outstanding value. It has an instant-start, 4-speed motor. Idler release is interlocked with a separate motor switch. A "Bi-Coupled" 12 watt vacuum tube output system drives a weighty 6" x 9" oval dual-cone high fidelity loudspeaker. High fidelity cartridge is the "Power Point" plug-in type. Turntable has a rubber mat and "twist-up" 45 center spindle. There is a standard phone jack for external speaker, headphones, or Newcomb Headphone Listening Center accessory. Power cord stows in a Hideaway compartment on side of case. Dual-acting bass-treble tone control matches source material to listening requirements. PORTABLE
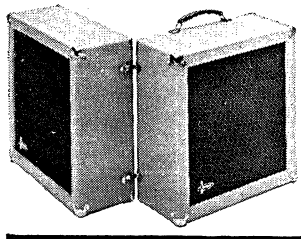
LOUDSPEAKERS

TR SERIES

Newcomb makes many types of portable loudspeakers for use with Newcomb Portable Combination Transcription Player/Public Address Systems. They vary in portability, directivity, efficiency, and frequency response. For example, the column speaker is highly directive, but not nearly as easy to carry as the compact S-212 Series models. The KN-200 reproducer combines widest frequency range with highest efficiency and exceptional intelligibility. The N-12 Series speakers are highly efficient, directive, intelligible and portable. All are excellent instruments, built to withstand rough treatment. Construction and finish matches player units.

ON THIS PAGE ARE SHOWN THE VARIOUS LOUDSPEAKER MODELS USED WITH NEWCOMB TR SERIES SYSTEMS



NEWCOMB S-212 SERIES

TR SERIES

Built with a great reserve of power for most uses — 40 watts peak per channel — the Newcomb TRS-1680 is perhaps the most complete and flexible portable sound system ever built. It reproduces stereo or mono with the turn of a knob. Stereo or mono tape or radio can be fed to the system. Live music and speech are reproduced either stereo- or monophonically.

TRS-1680 SERIES 80 WATT

It has three mike channels. The central mike puts the speaker or square dance caller in the middle, midway between the reproducers. There are separate treble, bass, and volume controls for phono or other reproduced sound. Each mike channel has its own, individual tone and volume controls. Mike tone controls are rotated for treble adjustment, pushed or pulled for bass. There is a blend control to provide any degree of stereo you wish. There are "Left" and "Right" inputs for radio, tape, or auxiliary; a scratch filter; "All" or "Phono" monitor jacks; jacks for two or four speakers with an impedance-matching switch. Turntable-amplifier unit DIMENSIONS: 9¼" x 17⅞" x 18⅝"; 43 lbs. POWER CONSUMPTION: 180 watts, 117 volts, 60 cycles a.c. A wide choice of reproducers to meet specific assignments is offered...

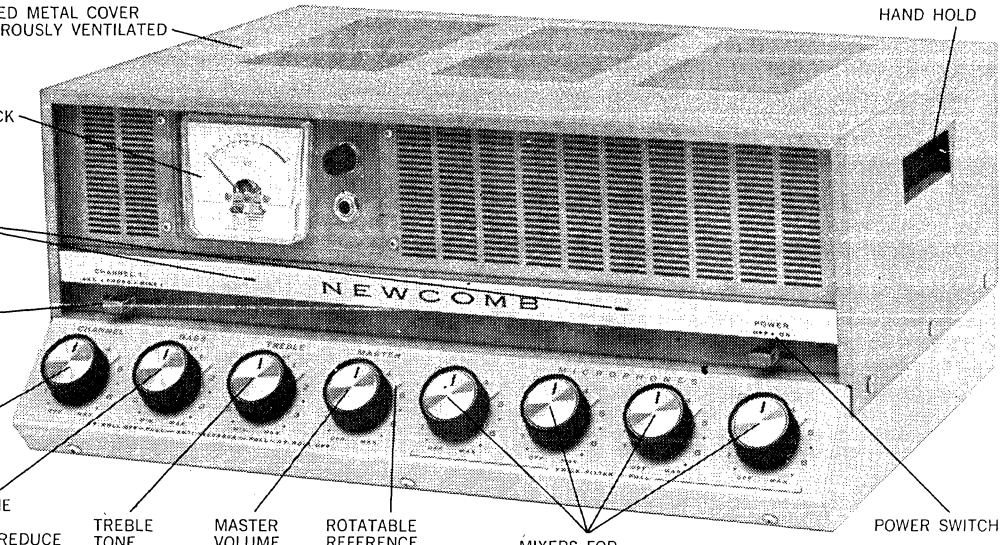
MODULAR PUBLIC ADDRESS AMPLIFIERS

CUSTOM SERIES K

MODULAR PUBLIC ADDRESS AMPLIFIERS OF THE VERY BEST QUALITY



Flexibility and performance without equal are provided by Newcomb Custom K Series public address amplifiers. "Custom" has a very real meaning in this instance. Within minutes you can assemble exactly the right combination of channels, power and features to custom fit a particular situation. You are not faced with the hours of assembly labor and testing necessary with conventional modular designs. You simply select the Newcomb Custom K mixer/preamplifier with the number of channels — three, four, or five — you need. Then choose the power amplifier module — 40, 60, or 125 Watts — needed for the location. Drop the power amplifier into the preamplifier chassis. Two plug-in connections. No soldering. Drive a few sheet metal screws and you're in business. Take your choice of a well-ventilated cabinet cover or a rack panel mount. A VU meter accessory with a phone jack is available and can be quickly added to any front end. A remote control accessory is available for the four-channel module.

Any preamplifier may be used as a mixer by itself by inserting a Model P Power Supply instead of a power amplifier module. Any power output module becomes a straight power amplifier when it is mounted in the Newcomb Model KB Booster Chassis. The Newcomb Custom K modular system is so simple and straightforward that it's a wonder public address amplifiers weren't made this way to begin with.

All modules are completely interchangeable.

The latest developments in vacuum tube technology and skilled hand craftsmanship are united to produce superb performance. Performance of Newcomb Custom K Series amplifiers has no equal. They operate with extremely low distortion at all power levels, supply unusually high useful power, run unbelievably cool. Vacuum tube design was chosen for the Custom K Series because no other method of amplification today provides the same combination of maximum performance, stability, reliability, extended life, and outright value. With vacuum tubes, repairs are easier and faster to make, cost less.

Visually, Custom K Series assemblies are exceedingly handsome, finished in soft, light shades of green. The control panel is slanted for convenient operation either seated or standing, and it is well illuminated. Custom K Series models abound with such refinements as movable reference markers on all knobs. To cut in a voice filter you simply pull the appropriate mixer knob. To kill feedback, pull tone control knobs. When you're out to prove what you can do, when you're putting in a model job, a job you'll be proud to put your nameplate on, that's the time to build with Newcomb Custom K.

SPECIFICATIONS — K3, K4R, K5 MIXER-PREAMPLIFIERS

All of the Newcomb Custom K mixer-preamplifier modules have space at the back of the chassis into which may be inserted either a Model 400, 600 or 1250 power amplifiers or the Model P power supply. Power is normally supplied to the front end by the power amplifier module; Model P is used when the preamp section is to be used as a separate mixer-control unit. Mixer models differ principally in the number of input channels. Each has one mike channel that is convertible by switch to use with a magnetic or ceramic phono pickup (preamp provides full RIAA response curve) or with a flat tuner or tape input. **Outputs:** 2 from each of two cathode followers, one before and one after the master control. Maximum output from followers: 10 volts into high impedance load. **Distortion:** less than ½%. D.C. on all filaments. **Frequency response:** ±1 db 20-20,000 cycles. **Bass tone control range:** −18 db to +18 db. **Low frequency roll off:** 3 db at 100 cycles, −12 db at 20 cycles. **Treble tone control range:** −18 db to +18 db. **High frequency roll off:** 3 db at 5,000 cycles, −12 db at 20,000 cycles. **Microphone impedance:** 2 megohms convertible to low impedance by Newcomb hum-free plug-in transformer. **Input volts required** for 1 volt output from cathode followers: **Mikes,** .0028 volts, gain 54* db, 2 megohms. **Magnetic,** .0022 volts, 100,000 ohms. MODEL P POWER SUPPLY takes the place of the power amplifier in the space provided in the K3, K4R, and K5 preamp modules, and supplies power to them through an octal socket. (It is never needed when a Model 400, 600, or 1250 power amplifier is used.) Model P includes a socket for a plug-in output transformer and output terminals for a balanced or unbalanced 600 ohm line. **Maximum 600 ohm output** = 0 VU. **Input** power: 117 volts, 60 cycles, 22 watts. **Wt.** 4½ lbs. **List:** (with tubes) $37.50.

SPECIFICATIONS — 400, 600, 1250 POWER AMPLIFIER MODULES

The power amplifier modules in Newcomb's Custom K Series are not usable alone; they must be installed in a K3, K4R, or K5 mixer-preamplifier chassis. If they are to be used simply as a booster amplifier, they can be mounted in a Model KB Booster Chassis. Circuits in all power amplifier modules are resistance-capacity coupled, screen-regulated, with fixed bias and inverse feedback. They include power supply for K3, K4R, and K5 preamps. All have an a.c. outlet and an external fuse post. All three models have some identical specifications: **Input impedance:** 1 megohm convertible to low impedance with hum-free plug-in line or bridging transformers. **Output impedances:** 4, 8, and 16 ohms to a terminal strip and two octal sockets; 25 and 70 volts balanced or unbalanced line to one octal socket. **Hum and noise:** 80 db below steady state power rating.

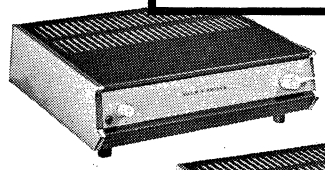
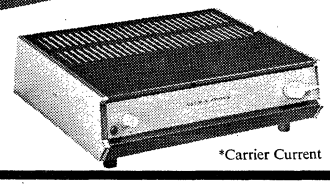
Featuring the TALK-A-PHONE "SONIC-GATE".

Your Voice Goes Through . . . | Noise and Hum are Screened Out . . .

The Sonic Gate circuit effectively suppresses line noises and hum by 30 db while system is in actual operation, as well as when in Stand-By position.





*Carrier Current

Provides selective communication. Each Master is equipped with a 6 or 12-channel selector; can converse with any other station selectively; can receive calls on any channel Master elects to use. As many as 6 separate conversations may be held simultaneously, with 12 Masters. Masters can talk with any station in system; can also set up conferences.

Wireless Staff Stations are for use where calls need not be originated, but where reply must be made. They are available for operation on any single channel desired—to match that of Master. They also can be used to receive Paging Calls from any Selective Wireless Master in the system . . . use as many Wireless Staffs as needed (all Staffs must operate on same channel for this purpose). Two or more Wireless Staffs on the same channel will function as a 2-Station System (without Master); they can originate calls and reply to each other.

Start a system with any number of Masters and Staffs. Where up to 12 stations are used, each on a separate channel, Master can converse selectively with any channel. If more than 12 stations are used, channels must be *shared;* stations on same channel will receive all calls to that channel. To change location, merely pick up unit and move . . . no rewiring or new installation is necessary. All stations are equipped with the original TALK-A-PHONE UNI-TRANS feature, which permits continuous one-way transmission for periods when you wish to dictate or "listen-in."

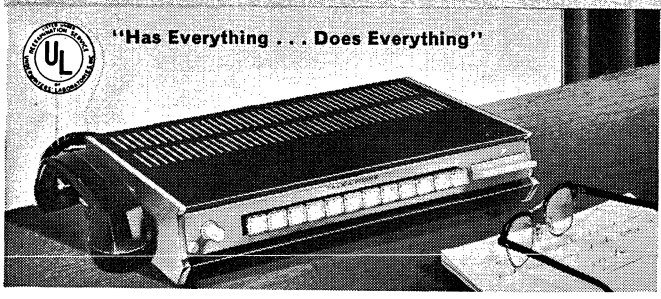
THE ALL-TRANSISTOR TALK-A-PHONE "CHIEF" AND "CHIEF REDI-POWER" INTERCOMMUNICATION SYSTEMS



One Model Meets Every Requirement

Setting a high standard in quality, design and performance, the TALK-A-PHONE "CHIEF" and "CHIEF REDI-POWER" meets the intercom needs of office, factory, institution, or any other commercial or private application. "CHIEF" Master Stations of 6, 12, 20, 30, 40 or 50 station capacity can be intermixed with "CHIEF REDI-POWER" Masters of different capacities, together with Staff Stations and Horns within the same system in any desired combination. Masters can talk with any other Master or Staff . . . page . . . and can utilize other optional equipment shown as well. Staffs can answer any Master and can originate calls to one Master, or to two Masters selectively.

ONLY THE TALK-A-PHONE "CHIEF" AND "CHIEF REDI-POWER" GIVE YOU ALL THESE FEATURES

- **DISTINCTIVELY STYLED**—Less than 3-inches high. In cabinets that combine the look and feel of fine-grained leather with the strength and rigidity of steel. Attractively finished in charcoal gray and brushed chrome.
- **"PRIVATE" OR "NON-PRIVATE" MASTERS AND STAFFS**—Exclusive Dynasonic Design enables stations to perform "privately" (so no one can listen-in), or "non-privately" (for reply without use of controls). The same station can be "private" to one or more Masters and "non-private" to others.
- **INCOMING CALL CHIME**—A standard feature of Masters. Indicates that your station is being called. Caller talks, voice follows.
- **MONITORING SIGNAL**—A standard feature of Masters and Staffs. Visually indicates to a "non-private" station that it is being monitored.
- **BUSY SIGNAL**—A standard feature of Masters and Staffs. Visually indicates when station you call is "busy." All units have facility to override "busy signal" for important calls.
- **DYNASONIC SELECTOR**—An exclusive TALK-A-PHONE feature that permits intermixing of stations and variation of performance. Add to system at anytime without discarding original equipment.
- **MULTI-MAGIC STATION SELECTOR**—A patented, exclusive TALK-A-PHONE feature that enables selection of up to 30 stations with only 12 push buttons . . . 40 and 50 stations with 14 push buttons . . . in the same attractive cabinet style and size.
- **UNI-TRANS DICTATION CONTROL**—No need to operate or hold down controls when one-way transmission is desired or when Cradle Phone is used.
- **EXTERNAL RELAY CONTROL**—A standard feature of Masters. Enables Master to activate external relays for operating siren, gong, light, etc. Use in extremely high noise level areas to signal personnel, who can then communicate with caller from Master in quieter location or in sound booth. Operates simultaneously with chime within Master.
- **RECIPROCAL POWER SUPPLY**—Each Master operates on 120 volts, AC only, and should be plugged-in. Where no electrical outlet is available, up to 30% of the "Chief" Masters in the system can operate without being plugged-in.
- **NOISE-FREE VOICE RANGE POWER**—The rugged, all-transistor high-gain amplifier provides unsurpassed clarity and naturalness of tone. The exclusive, patented TALK-A-PHONE circuit enables performance without noise, hum or distortion when used with TALK-A-PHONE cable.
- **HI-POWER STAFF STATIONS AND HORNS**—For use with any TALK-A-PHONE Master where high volume at Staff locations is needed. Ideal for paging speakers. K-HP-3 provides more than twice the volume of universal Staff; K-C-20 provides about 4 times greater volume . . . more with REDI-POWER Masters.
- **WALL SWITCH**—Combine with TALK-A-PHONE Horn or Hi-Power Staff to add origination-of-call feature.
- **"LD" LONG DISTANCE**—(optional accessory on Masters). For use over cable lines of 2,000 ft., 5,000 ft., 10,000 ft. or more without loss of volume. Functions only between Masters with LD . . . not between an LD Master and Staff. Built-in at factory at additional cost.
- **CRADLE PHONE**—(optional accessory on Masters or Staffs). Has live microphone. Provides listening privacy and greater speaking convenience. Diminishes background noises in noisy areas. Eliminates use of controls in conversation between Masters. Cuts off incoming voice from loudspeaker when in use.
- **WALL MOUNTED CRADLE PHONE**—(optional accessory). For noisy areas and listening privacy. Use with K-HP-3, K-C-20 and K-S-101 or K-S-102. Speaker disconnects when in use.
- **RIGHT-OF-WAY RELAY**—(optional accessory). Use with "CHIEF REDI-POWER" Masters to page any group of stations with a single button. Paged stations can also be used for intercommunication. K-RW-10 capacity, 10 stations, K-RW-20 capacity, 20 stations. Connects to one Master, other Masters also utilize facilities.
- **POWER PAGING BOOSTER**—(optional accessory). Use with "CHIEF" Masters to page a group of speakers with a single button. 50 watts output. Requires its own paging speakers (as K-C-20, K-HP-3). Provides paging facility only . . . paged stations cannot reply or originate calls through paging speakers. Connects to one Master, other Masters can also utilize facilities.

All "CHIEF" and "CHIEF REDI-POWER" Master Stations come complete with junction box and built-in power supply attached by 6' flexible cable. Master size: 14"w, 3½"h, 8¾"d. For 120 volts, AC only. U.L. Listed.

How to Determine Cable Requirements. To inter-connect Master Stations, measure from first Master to second Master only, from second to third Master only, etc., until the last unit in the system is reached, and total. For K-C-4920 and K-CRP-5920, use two lengths of 6226 Cable; and for K-C-4930 and K-CRP-5930 use three lengths of 6226 Cable, etc. To connect K-C-41, K-C-42 or K-HP-3 Staff Stations, measure from Staff Station to the one Master to which Staff Station originates calls. To connect the K-C-42 Staff Station measure a separate length of cable from Staff Station to each Master Station to which Staff originates calls (for each K-C-41 or K-C-42, follow same procedure). Connect K-S-111 at any convenient point between remote speaker and Master Station.

TALK-A-PHONE ALL-TRANSISTOR "CHIEF REDI-POWER" MASTERS
These units have all the operational features of the "CHIEF," plus the additional feature of built-in extra power (up to 30 watts) for use when and as needed. Provides additional volume for calling many stations at once, or noisy locations singly. Needs no separate power booster, which would eliminate return speech. Return speech is received at normal room volume. REDI-POWER Masters have a self-compensating amount of volume, whether you call 2, 10 or 20 stations simultaneously. Each station receives its pre-determined volume with no division of output as you call more stations at once. Use REDI-POWER Masters with "CHIEF" Masters and Staffs in same system. Add K-RW-10 or K-RW-20 and REDI-POWER Masters can page any group of stations with a single selector button. Paged stations can also be used for intercommunication. Operates on 120 volts, AC only. ATLAS SOUND PAGING AND TALK BACK SPEAKERS

HU and **CJ** models are equipped with the "Versalock" mounting bracket. Rigid, rugged, dependable bracket is completely adjustable on both a horizontal and vertical plane, affording "pin-point" directivity and simple secure mounting. HU horns are constructed of aluminum, while the CJ horns are molded of indestructible Fiberglass. Rugged diecastings and tough steel parts add strength. All are 100% weatherproof.

HU-12N

HU-12N Small in size, low in cost. Excellent for low power paging and talk-back systems where limited coverage is required.

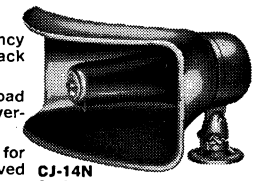
HU-15N
HU-24N

HU-15N The most popular all-purpose, trouble-free speaker of its type and size.

HU-24N Similar to HU-15N. Larger horn improves low frequency response, increases over-all efficiency. For paging and talk-back systems that are also required to reproduce music.

CJ-14N Wide angle speaker with rectangular horn opening for broad sound dispersion in horizontal plane while maintaining good vertical coverage.

EC-10 Lowest priced American-made speaker designed specially for low power systems requiring limited coverage. Gives improved results and high efficiency for intercom and other applications formerly using cone speakers.

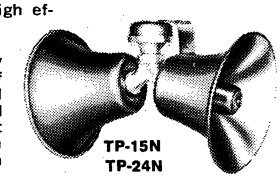


CJ-14N
CJ-30N

Horn sections molded of new tough, all-weather, acrylic plastic. Handsome beige-brown color combination blends with any decor. Tough steel bracket is adjustable and makes mounting simple and secure. Unmatched where size, weight, appearance and high efficiency combined with low cost are factors.

CJ-30N Similar to CJ-14N, except power handling capacity is increased. Larger, wide angle horn improves low frequency response.

TP-15N One high efficiency driver unit does the work of two for low cost bi-directional coverage in long corridors and outdoors. Universal bracket mounts dual horns at a 10° angle down or out from wall surface or pole.



TP-15N
TP-24N

TP-24N Same as TP-15N but equipped with oversized horns for improved low frequency response. Excellent for bi-directional paging locations required to reproduce music.

The DeCor speakers described below are designed to simulate a lamp, handsomely styled for contemporary interiors. All horn parts, fully adjustable bracket and base-canopy, are finished in brushed satin aluminum. Base-canopy conceals wiring and matching transformer, if required. All mounting hardware included. May be used outdoors in sheltered location.

Components are housed in die-cast aluminum inclosure which is designed to compliment every setting from the shopping center to the patio.

C SPEAKERS — COMMERCIAL SOUND

Oxford public address speakers are designed for higher output, with less power input. This maximum conversion efficiency in power and coverage permits a reduction in the number of speakers usually required in an installation. And, lower rated power amplifiers may be used with a substantial savings in cost.

D INTER-COM SPEAKERS

Oxford high efficency Inter-com speakers are designed to give round, full and clear reproduction in the voice frequency range and at the same time suppress unwanted background noises. Even whispers will be reproduced with great clarity in areas with high background noise levels . . . shouts are reproduced without distortion.

E ALL WEATHER SPEAKERS

Oxford offers a complete line of All Weather speakers specifically designed for maximum operating performance regardless of weather conditions. They feature exclusive Oxford HYDRO-PRUF cones for full environmental protection. Special moisture protected voice coils prevent humidity damage. Extra heavy cadmium plating, inside and out, resists corrosion.

F CERAMIC SPEAKERS

Featuring shallow construction, these speakers are ideal for in-wall, stereo wing, picture frame, and other installations where space is at a premium. In addition to the standard models, Oxford also offers ceramic units with exclusive Oxford Hidden Magnet design. The magnet is mounted between the basket and the cone, permitting use of the dual cone for extended range while retaining the thin silhouette.

G EXACT REPLACEMENT AUTOMOTIVE RADIO SPEAKERS

A complete line is available, including exact replacement speakers, universal speakers, special units for custom automobiles, and speakers specifically designed for transistorized automobile radios.

H REPLACEMENT SPEAKERS

Oxford manufactures the most complete line of standard replacement speakers available for original equipment, including, phonographs, tape recorders, radios and television sets. The speaker sizes range from 2" through 15", in dimensions to insure a perfect installation.

I HIGH FIDELITY SPEAKERS

The Oxford line offers a full range of woofers, tweeters, extended range and co-axial speakers. They are all designed to reproduce the entire audio spectrum with true high fidelity so necessary for fine stereo reproduction. For the price conscious hi-fi equipment buyer, Oxford offers the most outstanding value.

J PROFESSIONAL MUSICAL INSTRUMENT SPEAKERS

As a "full line" loudspeaker manufacturer, Oxford also produces speakers for many "special purposes." The most popular of these is a series designed for use with electric musical instruments, such as guitars and electronic organs. It is only with a speaker designed for this particular application that the full quality of the instrument and performance can be appreciated.

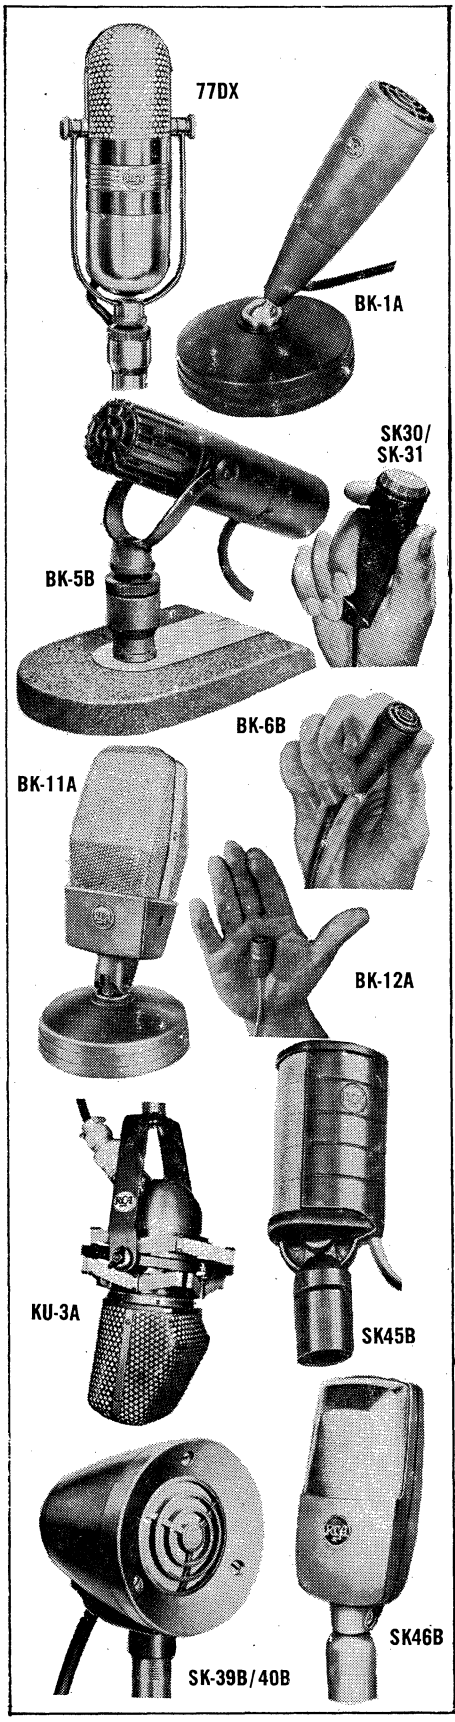
RCA

MICROPHONES AND ACCESSORIES



POLYDIRECTIONAL RIBBON — 77DX

The quality microphone standard of the broadcast industry, the RCA 77DX, is available in two models: one with a low-gloss finish for TV, the other a satin chrome finish for AM and FM. The 77DX offers a choice of unidirectional, bidirectional, or nondirectional pickup patterns which are easily changed by a selector switch. Three frequency-response variations on the basic pickup patterns may also be obtained, thus a total of nine different directional characteristics may be ultilized. The 30- to 20,000-Hz frequency response of the 77DX makes it suitable for every high-fidelity broadcasting and recording application. Output impedance is factory connected for 250 ohms; however, it may be easily reconnected for a 30- or 150-ohm output impedance. This 77DX mounts on a standard ½-inch pipe thread, and comes with 30 feet of three-conductor shielded cable, less plug.

77DX Satin Chrome Finish **$290.00***
77DX-G Low Luster Gray Finish **275.00***

NONDIRECTIONAL DYNAMIC — BK-1A

Ideal for outdoor use or wherever constant handling is required, the BK-1A offers smooth response for both voice and music. The BK-1A is also an excellent unit for sports, panel shows, interviews, and remotes. It provides uniform response from 50 to 15,000 Hz. The swivel mounting of the BK-1A can be used to control directional characteristics. The vertical position is nondirectional; the horizontal position is semidirectional. The output impedance is 250 ohms, but 30- and 150-ohm connections are included. The BK-1A may be mounted on any type stand having ½-inch pipe thread and is perfect for use with the MA-06 desk stand. Thirty feet of three-conductor cable is supplied, less connector.

BK-1A **$86.00***

UNIAXIAL RIBBON — BK-5B

The BK-5B is a high quality ribbon instrument designed especially for use in high noise areas, as well as being suitable for general studio purposes. Maximum sensitivity of the BK-5B is in the major mechanical axis, and this produces an extremely directional cardioid pattern. Frequency response from 30 to 20,000 Hz permits using the BK-5B for all types of high fidelity voice and music pickups. The output is connected for 250 ohms, but may easily be changed to 30 or 150 ohms. It is supplied with thirty feet of three-conductor cable, less connector. A wind-screen is available for outdoor use. The BK-5B is supported by a fork mounting which has ⅛-inch pipe thread.

BK-5B **$158.00***

LAVALIER — BK-6B

The BK-6B is a lightweight microphone with excellent speech balance, ideal for remotes, interviews, and other applications where an inconspicuous microphone is needed. The 2.3-ounce unit is only $2\frac{9}{16}$ by $1\frac{5}{16}$ inches. Wide-range frequency response (60-15,000 Hz) permits using the microphone for all speech applications. The 250-ohm output impedance may be changed to 30 or 150 ohms by a simple change of cable connections. The small size and lanyard mounting make the BK-6B extremely versatile. Thirty feet of two-conductor shielded cable is supplied, less connector.

BK16B with lanyard and fastener **$86.00***

BIDIRECTIONAL RIBBON — BK-11A

In the studio or at indoor remotes, whether a simple interview program or full orchestra pickup, the bidirectional characteristics and excellent frequency response (20 to 20,000 Hz) make the BK-11A an extremely useful production tool. The output can be connected for 30-, 150-, and 250-ohm operation. A three-position switch permits selection of desired frequency ranges for voice and music. The BK-11A has been designed for use with the inexpensive MA-06 desk stand, and it can also be used with any standard ½-inch pipe thread desk or floor stand. Thirty feet of three-conductor cable is supplied without a connector.

BK-11A **$107.00***

SUBMINIATURE LAVALIER — BK-12A

The RCA BK-12A is a high-quality subminiature microphone weighing just 20 grams and measuring only ¾" x 1½". It has a wide-frequency response of 60 to 18,000 Hz, which has been tailored for proper speech balance. A line impedance voice coil permits use with 30- to 250-ohm unloaded inputs. The BK-12A is essentially nondirectional to 6,000 Hz, and as a result, ordinary errors in orientation have negligible effect upon response. It is supplied with lanyard, tie-clip holder, cable clip and 30 feet of two-conductor cable (less connector).

BK-12A **$95.00***

HIGH-OUTPUT UNIDIRECTIONAL RIBBON — KU-3A

The KU-3A is a high-quality microphone for TV, motion picture and recording studio line pickup or wherever boom operation is used. It provides uniform response from 30 to 15,000 Hz. Output impedance is factory connected for 250 ohms; however, it may be easily connected for a 30- or 150-ohm output impedance. It is supplied with voice/music switch, resilient mounting and 12 feet of pigtail cable, less connector.

KU-3A **$675.00***

GENERAL PURPOSE DYNAMIC — SK-30/SK-31

Here is an excellent nondirectional, general-purpose microphone available as a low-impedance (SK-30) or high-impedance (SK-31) unit. It is rugged and lightweight with good response to voice and music (50-14,000 Hz). In addition to being hand held, it may be swivel mounted on a desk or floor stand or it may be mounted on a goose-neck stand. A ⅝-inch-27 thread swivel adaptor is available for floor or desk stand mounting. The microphone comes complete with 20 feet of shielded cable (less connector).

SK-30 ..... **$30.00***
SK-31 ..... **$31.00***

NONDIRECTIONAL DYNAMIC — SK-39B/40B (Low Z — High Z)

Cue and talk-back applications are perfect for this inexpensive dynamic microphone. The SK-39B/40B is rugged and relatively insensitive to mechanical shock and wind. Frequency response is 60 to 10,000 Hz. It may be mounted on any ⅝-inch-27 fixture thread, and is supplied with 7 feet of three-conductor cable (less connector).

SK-39B/40B **$33.00***

NONDIRECTIONAL DYNAMIC — SK-45B

Ideal for talk-back, cue, and public address use, the rugged lightweight SK-45B microphone offers good voice reproduction. It may be connected for a 150- to 200-ohm balanced output or a 15,000-ohm output. Response is from 70 to 12,000 Hz. Mounting with any ⅝-inch-27 fixture thread permits the use of low cost stands. The SK-45B is supplied with 25 feet of two-conductor cable less connector.

SK-45B **$37.00***

BIDIRECTIONAL RIBBON — SK-46

The SK-46 is designed for high quality indoor use. It has excellent frequency response (40 - 15,000 Hz) and bidirectional pickup characteristics. Output impedance is 200 ohms, but it may be reconnected to produce a 15,000-ohm output. Dependable performance as well as attractive styling make the SK-46 an ideal choice for high fidelity applications. The SK-46 has a ⅝-inch-27 mounting thread and is supplied with 25 feet of two-conductor shielded cable (less connnector).

UNISPHERE A Microphones
MODELS 585SA • 585SB • 585SAV • 585SBV

The Unisphere A Series of Microphones are economical undirectional dynamic microphones featuring special filters that provide protection from wind and "pop" (explosive breath sounds). They also eliminate annoying loudspeaker "squeal" caused by feedback. These models are particularly suitable for use in locations where omnidirectional microphones may not operate properly because of poor acoustics or where wind creates a problem. The Model 585 Series comes complete with shock-mounted cartridge, On-Off switch, detachable cable, and a Model A25B swivel adapter.

The Model 585SAV and 585SBV are two of the most ingenious microphones ever designed because the volume control on the microphone case enables the user to change the loudness of the P.A. system at the microphone location. Ideal for applications where the amplifier controls are inaccessible or where the speaker or singer wants to control his own volume for dramatic effects.

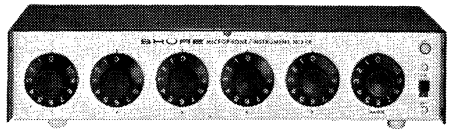
SHURE MICROPHONE MIXERS

SHURE M68 AND M68FC MICROPHONE MIXER (TRANSISTORIZED—PORTABLE)



PRACTICAL—The Shure M68 Mixer is a practical, efficient and economical way of increasing the efficiency, usefulness and flexibility of public-address and paging systems, or tape recorders, by making it possible to use more than one microphone or other sound source. You can strategically place microphones so that everybody who should be heard will have a microphone close at hand. It is particularly useful where additional microphones are needed for panels or for audience Question-and-Answer sessions.

UNIQUE—This new mixer is unique in that it satisfies the needs of most public-address systems and serious tape recording enthusiasts, while being light enough to be portable, simple to operate and modest in cost. It is the **only** mixer which strikes a happy medium between the expensive heavy and complex permanent-installation type mixer and the extremely low-cost units of limited usefulness.

With the M68, each microphone (or other sound source) can be cut in or out of the system (and independently balanced for volume) with no loss in microphone output level. In addition to independent volume controls, a master volume control simultaneously controls the gain of all inputs. The M68 can, therefore, be used as a conveniently "at-hand" P.A. system volume control in situations where the regular amplifier is located some distance away.

VERSATILE—You can use high or low impedance microphones, in any mix, with any type amplifier without need for expensive line transformers.

You can tape record from multiple sound sources or record sound-on-sound with two recorders.

Frequency response is 30-20,000 Hz (cps). Underwriters Laboratory listed for use in commercial applications. Easily portable . . . 2⅝" x 11¹⁵⁄₁₆" x 5³⁄₁₆", weighs only 4 lbs. 105-125 V. A.C. 50/60 cps.

A great new breakthrough in solid state technology.

the UNIVERSITY POWER-LINE WIDE RANGE HIGH EFFICIENCY AMPLIFIERS (Pat. Pending)

Now, for the first time, a line of power amplifiers so advanced in engineering and efficiency, taking full advantage of the latest state-of-the-art technology that a whole new concept in Public Address performance and installation is now possible. Laboratory and field tested, this new concept involves amplifiers so radical in advanced circuitry as to set totally new standards of performance. A design with such stability and regulation that costly power output as well as line transformers can be eliminated. Sixteen amplifiers, in the 4 most popular public address power ratings, make up this dramatically new and exciting line. Eight of the models are available, at substantial savings, to take advantage of University's New Transformerless Concept. For installations that require the use of output and line transformers, eight models are available. For a complete new brochure of information concerning University's New Transformerless Concept, write Box RM, University Sound, 9500 West Reno, Oklahoma City, Oklahoma 73126.

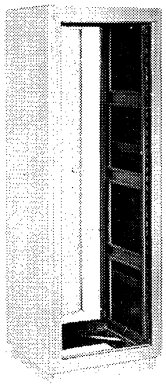
Series "60" Cabinet Racks



Scientifically designed to meet all requirements for human needs as well as component physical specifications; the most practical cabinet rack developed for either a single piece of equipment or a large instrumentation system. Very economical to the user, units are shipped fully assembled and ready for immediate use.

Basic frame welded in a solid unit composed of 14-gauge cold-rolled steel channels. Sides have "U" braces with perforated channels for fastening vertical adjustable mounting rails. Rails also support other types of equipment such as brackets, shelves, slides, etc. Eliminates need of drilling holes in the rack. Sides and rear door made of 16 gauge steel. Door may be mounted to open left or right. Vertical channel, 6" wide, welded to door to prevent vibration or whip. Two pairs of panel mounting rails are supplied; fully adjustable. Panels may be mounted in front and rear at the same time. Front rails drilled and tapped 10-32 W.E. spacing. Rear rails are drilled according to universal spacing.

All Series Sixty enclosures may be quickly combined with each other to create units of any desired width as shown in the Add-A-Rack series. In addition, such accessories as desk tops, turrets, drawers, slides, sloping panel supports and front door are easily installed.

Standard finishes are smooth baked enamel over a primer. For two-tone gray, specify by adding suffix **SG.** For two-tone blue, add suffix **SB** to order number. Standard Bud relay rack panels are available for the Series Sixty racks in light gray and light blue; when ordering, add suffix **SG** for gray; **SB** for blue.

Bud Steel Panel PS 1250 or Aluminum Panel PA-1101 may be used to close opening if desired. Perforated back may be removed and a standard steel or aluminum panel may be used to close back opening entirely.

Sides are attached by means of holding flanges on the bottom of the frame and nut at top. Handles may be fastened to sides.

Cabinets may be fastened side-to-side in batteries of two or more or may be stacked one on another. Four rubber feet are regularly supplied.

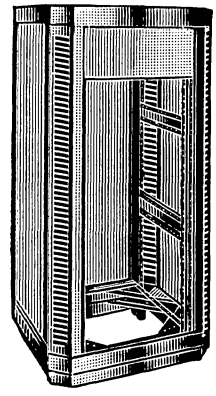
•NEW ZEPHYR 8 CABINET RACKS



Combine striking appearance with increased utility, extra ventilation, and unusually sturdy construction. Units are completely assembled with all-welded 14 gauge steel frames. Sides and reinforced rear door are of 16 gauge steel. Sides of frame are reinforced by channel braces to which panel mounting rails are attached; front and rear mounting rails are adjustable. Sides may by removed from outside of rack for easy access to interior. The octagonal shape and louvres placed in the four narrow sides permit exceptional ventilating capability. If corner placement is desired or combinations of racks are placed together, this shape allows for a "center ventilated system." Also, the outer shape surrounding the inner structural frame provides extra space for longitudinal or vertical placement of plenums, cable-track, buss ducts, etc. Casters may be attached to the base or removable sub-base. Front doors, available as optional accessories, are equipped with a flush-type latch. Available in two-tone gray finish only.

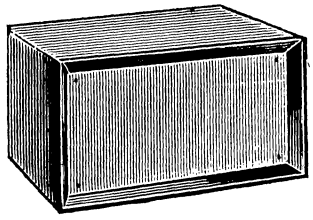
SHADOW CABINETS



An extremely versatile housing since both front and rear panels as well as the bottom may be removed for installation or servicing purposes. Unusually attractive appearance is created by recessing the front panel one inch as well as by beveling the front edges of the body.

The recessed front panel prevents accidental movement of controls, knobs, and switches attached to it.

The two piece body of the shadow cabinet is made of 18 gauge steel and the panels of 16 gauge steel. Finish is light gray hammertone.

Four rubber feet attached to the bottom of the cabinet eliminate marring of the surface on which it may be placed.

Typical Structures

System of metal cabinet construction, ideal for research and prototype work, permits quick assembly of cases, cabinets and racks using the simplest of tools. Complex structures may be built to your design using a variety of corner castings and extrusions held rigidly with friction clips or screws. Panels may be cut to size from sheet aluminum or steel, fitted grooves or screw fastened. No grinding or welding needed.

Bud Slimline 901 Imlok is based upon the same, proven principles as the Standard Imlok system. The basic difference is lighter weight and narrower appearance of the extrusions; corner connectors are smaller in size and are not visible in the completed housing. Connectors are 380 aluminum die castings; extrusions are 6063 aluminum. A really attractive small rectangular case, large elegant console or multiangular structure can be made with Slimline 901 Imlok. Whether for a production run or a single prototype, we can supply the material or make a complete enclosure.

L M B® PRESENTS SOMETHING NEW IN CHASSIS —

THE CHASSIS WITH THE CAP COVERS AS ORIGINATED BY LMB®

Built with the new original LMB® popular cap cover construction. This construction enables the builder to use either the top or the bottom of the chassis for construction. The Chassis can also be mounted on its side and construction can be on both top and bottom at the same time. Sturdily built from Aircraft quality aluminum, Type 3003, H-14, the same material as is used in the construction of all LMB® precision box chassis. Special technique in welding the corners makes for a stronger chassis than the orthodox type. Cap construction allows for using all the space inside the chassis without being hindered by the mounting flange, which takes from 10% to 20% of the mounting space out of the average chassis.

The P Series are perforated on all four sides and are ideal where heat dissipation is a factor. LMB® chassis — the better chassis, with the year's ahead advanced construction for your better project application. An advanced quality product competitively priced.

CONSTRUCTION DETAILS OF ASSEMBLED FULLY WELDED RACKS

To create a clear understanding of typical PAR-METAL PRODUCTS rack construction, the cut-away illustration below of a Series PL/FL cabinet details the features. From this simplified drawing and the enlargement of critical support areas, the quality of construction is evident. These versatile racks are planned to accept accessories that complement the widest variety of your electronic equipment.

EACH PAR-METAL MODULAR RACK FRAME is welded into a completely assembled unit. Doors, Top Panels, Panel Mounting Angles and ALL necessary trims and mouldings are included. When set in rows of any quantity, necessary joining trims are also included. Details and dimensions are on Par-Metal Pages 6 thru 12. Full check lists of optional accessories on Par-Metal Pages 9, 10 and 12.

REMOVABLE TOP PANELS: Blank formed steel panels are standard. For louvered, fan opening or ventilating top panels, see Par-Metal Page 23.

DETACHABLE SIDE PANELS: (Not used on Models PX/FX)

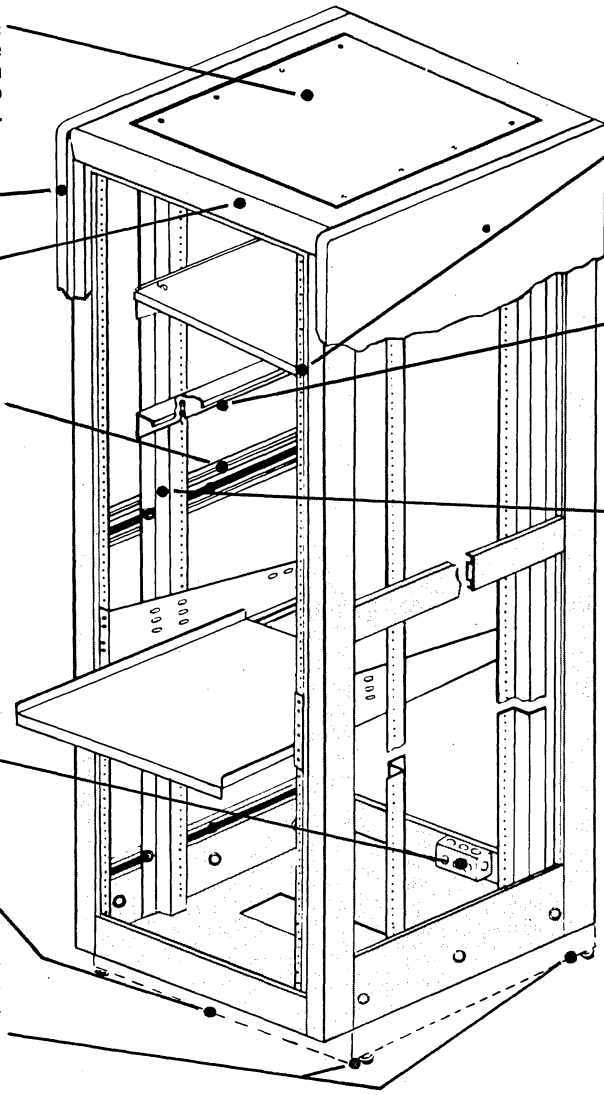
FRONT MOULDINGS: (Not used on Models PC/FC)

BOLT RETAINER RAILS: These tracks permit you to locate and lock both Panel Mounting Angles and Vertical Side Supports at your choice of forward or back position. Mounting bolts, hex nuts and lock washers are supplied.

ELECTRICAL OUTLETS: A duplex outlet and utility box are installed under the rear door. Knockout holes for cable connections generously provided.

RECESSED BASES: Available for all racks as an optional accessory.

FLOOR LEVELERS: Four are supplied for each rack. Predrilled holes for floor levelers may also be used to bolt rack bottom to base or roller truck.



PANEL MOUNTING ANGLES: Made from 1½" x 1½" x 3/16" structural steel angle iron. Completely adjustable back to front. Tapped 12/24 (10/32 optional) to meet standard EIA* and WE* hole spacing specifications. For Contempo Panel Mounting Angles, see Par-Metal Page 14.

SIDE MOUNTING BRACKETS: May be used separately or with shelves, as shown. Slots allow for vertical adjustment. Zinc plated.

VERTICAL SIDE SUPPORTS: For attaching Side Mounting Brackets, Equipment Shelves, Slides, Extension Tables, etc. Made from #12 Gauge (.104") steel tapped 10/32 on standard EIA* and WE* hole spacing specifications. Mounting bolts, hex nuts and lock washers are provided.

DOORS: (Not illustrated) Cut from a single sheet of 1/16" cold rolled steel and "dutch formed" on all sides to provide smooth, double thick edges. Available solid or with various modifications. (See Par-Metal Page 23). Lock handles are furnished on racks with front and rear doors. Racks with rear doors only have non-lock handles but lock handles are available. Contempto doors are "fan shaped."

RACK FRAMES are #12 Gauge Steel (.104") and are fully welded, and have modern, functional design.

PANEL MOUNTING ANGLES of 3/16" structural steel are included. Hole spacing will match **either WE** or **EIA** specifications. Holes are tapped for 12/24 screws. 10/32 tapped holes are optional at no extra cost. Contempo-Panel Mounting Angles are tapped 10-32 only. Angles are secured to rails with ⅜" diameter steel bolts to provide maximum forward and back adjustment, for optional front to rear positioning.

DOORS: Except for Contempo Front Door (Series FC, see #4 above), all doors are "Dutch Formed" (one piece out of #16 gauge steel (.059"). On Racks with front doors, a solid door is standard. Louvered Rear Door is standard on all racks. However other door modifications are optional at no charge (see Part-Metal Page 23). To save aisle space, racks 30" wide or more have double doors with three-point latches.

DOOR HANDLES are die cast, chrome plated and are non-locking. Lock handles are on both doors on Racks with "F" prefix.

REMOVABLE TOP PANELS are standard. For ventilating modifications see Par-Metal Page 23.

RECESSED RACK BASES are listed on Par-Metal Pages 6-8, 11. Do not use rack base with roller trucks.

HARDWARE is provided as needed at no charge. This includes bolts, washers, nuts, panel mounting screws and a grounding duplex electric outlet (below rear door).

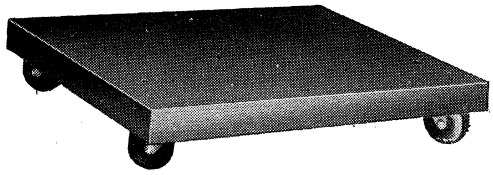
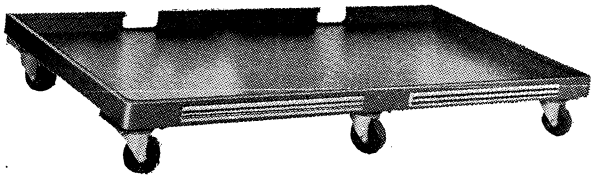
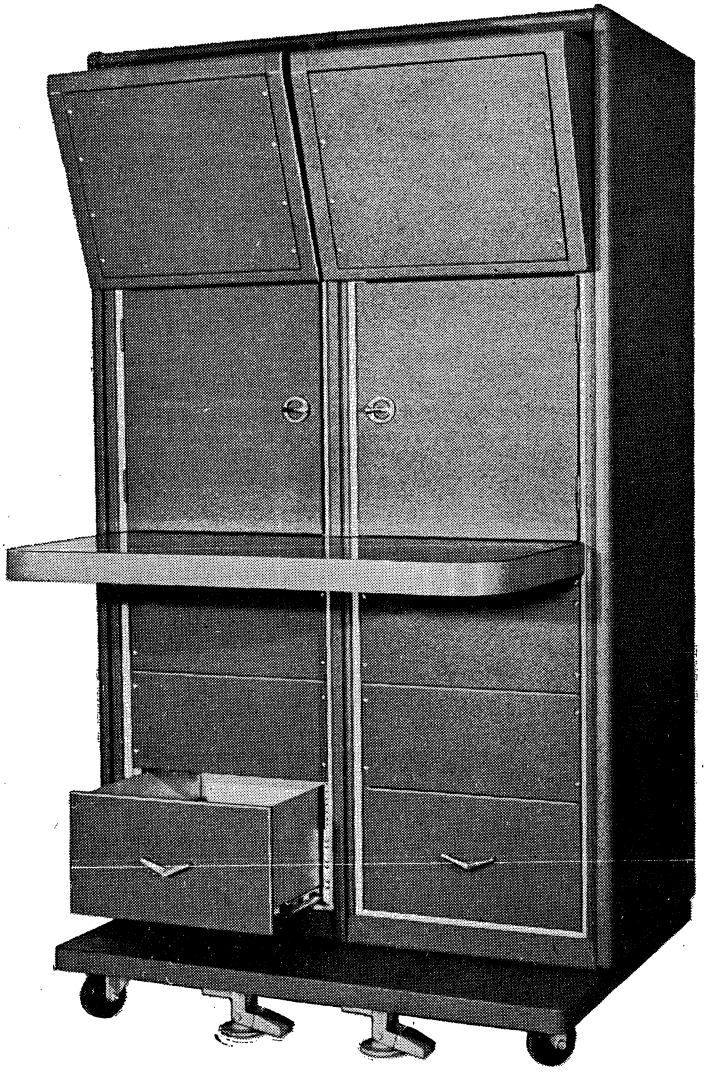
Par-Metal ROLLER TRUCKS



A Single Unit Contempo Roller Truck, Model No. CR-192-1.



A Double Professional Roller Truck, Model No. HD-426-2.



2 PL-6718-B Racks with 1 RX-219 Exterior Table and a double EB-502 Extended Base Roller Truck with 2 EBL-501 Floor Locks.

GENERAL DESCRIPTION

ROLLER TRUCKS are engineered to fit and complement **all** PAR-METAL cabinet racks. All Roller Trucks designated for PL/FL, PR/FR, PX/FX, ER/FD and DL racks are **Dish Shaped.** The inside dimensions are slightly larger than cabinet sizes, as a safety factor, and to provide better weight distribution. These models have rounded front corners and chrome plated moulding.

CONTEMPO-ROLLER TRUCKS (Models CR, CRB and CEB) are **Pan Shaped** — flat across the top with aprons which partially cover the casters. They are sized to match the rack they support. Mating holes allow rapid bolting to the rack. Roller Trucks are available for one, two, or three racks. Single rack trucks have four casters... double rack trucks, six casters... and triple rack trucks have eight casters.

Unless specified, **ALL** Roller Trucks except CONTEMPO, are finished in blue-gray wrinkle enamel. For PC/FC Racks, (Models CR, CRB and CEB) the **standard** finish is Dawn Gray Vinyl. When included in the order, Roller Trucks are matched to the Rack. For full finishing color guide, turn to PAR-METAL Page 4.

HEAVY DUTY TRUCKS: Construction: 1/16" welded steel plus 7/64" steel reinforcing braces. Casters: 3" diameter, swivel type, ball bearing, Rockite Composition. Non-marking wheels. Load Capacity 225 lbs. per wheel. Single Units have four casters, Double Units have six casters and Triple Units have eight.

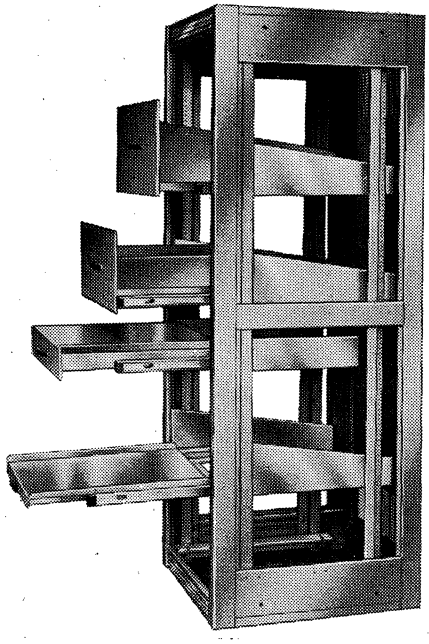
Par-Metal SLIDE ASSEMBLIES



SIMPLICITY: Just a cradle and a shelf, table or drawer are all that is required. No time consuming assembly of slides and no alignment problem.

EASE OF INSTALLATION: Cradle is mounted to panel angles of the rack with screws and drawer, table or shelf drops into place. This manner of installing the sliding unit permits fast removal for service of equipment.

MOUNTING METHODS: Brackets are attached to Panel Angles and may be attached to Vertical Side Supports for additional stability. Either method will provide rigid support. Both may be used simultaneously.

FULL EXTENSION of the equipment from the rack is engineered in. Thus, accessibility to top, sides, and back of most adjustments may be made without removal.

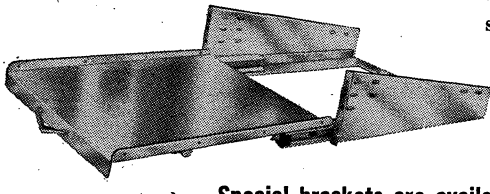
RUGGED CONSTRUCTION: Parts welded or fastened with stainless steel rivets and machine screws... supporting parts made from 12 gauge (.104") Prime Steel.

MINIMAL DEFLECTION is produced when the listed load capacities are measured with the slides fully extended.

HANDLES: A **"V"** Shaped Chrome Plated Pull Handle Model V-24 with necessary hardware is standard equipment on all Slide Assemblies. On **CONTEMPO** line **ONLY**, to substitute modern handle H-505 (at same cost) Suffix "H" MUST be added to model number on your original order.

BASIC SLIDE ASSEMBLIES: Consist of a readily removable shelf, a pair of slides, and a mounting cradle. Each part is ready for installation. All movable parts are mounted on ball bearing wheels. Mounting or removal of slide is extremely simple and does not require tools.

Installation may be made to rack (or console) panel mounting angles or to standard vertical side supports through holes pre-drilled in the side brackets. Four Sizes are listed for using either 19" or 24" wide panels. ALL parts are zinc plated.



*** All load capacities are conservatively rated to carry the full load with the sliding shelf completely extended.** All parts are zinc plated.

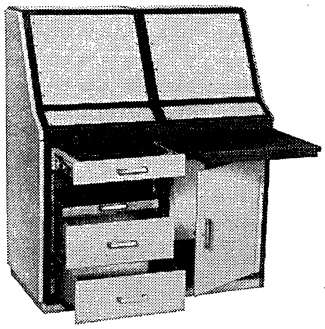
DOUBLE UNIT ASSEMBLY



WITH 2 CONTEMPO-PEDS, Model #CPD-24. 2 Top Cabinets Model #CF-19 and an Exterior Table Model #CCT-216.

GENERAL DESCRIPTION

Console Assemblies house Electronic Equipment at desk level. This combination of equipment enclosures with control cabinets, all 19" panel widths, supplies enough variety to satisfy most needs, often eliminating custom construction.

PAR-METAL'S 6 different pedestals in 2 depths and in both desk and stand-up heights, along with 14 different Desk Panel Cabinets — **PLUS** the industry's **ONLY** line of both Pedestal and Top Cabinet Angular Wedges, offers the widest choice of electronic housing assemblies. PAR-METAL'S Consoles are made in 2 basic design categories. **Professional Pedestals** (Traditional Design — use prefix PD) are desk height, 24¼" and 34¼" deep. Four Desk Top Cabinets in Single, Double, Triple or Quad lengths, complete these assemblies.

CONTEMPO-PEDS (Modern Design — use prefixes CPD or CPS) add a new dimension to the 24¼" and 34¾" deep desk height models. PAR-METAL proudly introduces to the trade, its **exclusive** line of CONTEMPO-PEDS in Stand-up Height, with Table Tops 40" from the floor. Ten new CONTEMPO Top Cabinets with matching pedestal and top cabinet Angular Wedges (at both 30° and 45° angles) give the engineer unlimited scope in designing a satisfactory configuration. Top Cabinets as well as pedestals are made with removable end panels. This permits ready addition (or removal) of a section when future use dictates.

Standard finish on the **CONTEMPO** line is a combination of Dawn Gray and Charcoal Gray Vinyl. Any color or combination of finishes in enamels, lacquers, suedes or acrylics is available.

To fit these Consoles, **PAR-METAL** manufactures complete accessories including Basic Slides, Drawers, Doors, Formica Table Tops, Side Panels, End Pedestals, Casters and Panels.

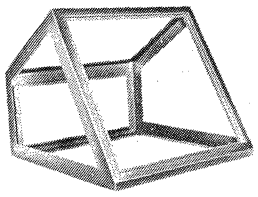
CONTEMPO-RAMA OF DESK PANEL CABINETS
For 19" Wide Panels

10 NEW CONTEMPO MODELS • NEW FEATURES • NEW USES

The SAME FULLY WELDED Sturdy Construction!



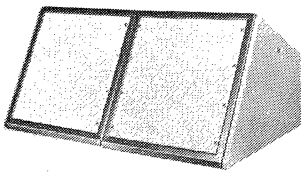
Desk Top Cabinet #PT-19 is shown without End Panels or Formed Panels. It is typical of ALL Models.

PAR-METAL's **CONTEMPO Top Cabinets** are made in single units with detachable End Panel, thus permitting the addition and/or removal of a unit at any time. Mating hardware is supplied. End Panels fit into brackets and lock in place with a ¼ turn cowl fastener, and are set-in ⅜" off the edges.

To meet the exacting demands of modern electronics, our engineers have designed many new models. Your choice of layout configuration is further extended by PAR-METAL's new and exclusive line of **ANGULAR WEDGES** for both CONTEMPO-PEDS and DESK TOP CABINETS. (Details are on PAR-METAL Page 32). They satisfy a long overdue need in the industry.

All models except LS-24 fit exactly and use no table tops on the 24¼" deep **CONTEMPO-PEDS.** For Model LS-24 and to use **any** model on a 34¾" deep pedestal, Formica Table Tops are listed on PAR-METAL Page 30. All CONTEMPO-PEDS may use exterior tables (see PAR-METAL Page 29). To decorate the CONTEMPO-LINE, we **add** a New Look! For the entire CONTEMPO-RAMA, **standard finish** is a combination of Dawn Gray and Charcoal Gray Textured Vinyl. Your choice of other available finishes are shown on PAR-METAL Page 24.

Construction: CONTEMPO Desk Top Cabinets are 21⅛" wide. A full complement of 19" wide blank formed panels are supplied. They are listed with each cabinet's description. A flat ⅛" **steel** or **aluminum** panel may be substituted for these formed panels without extra charge, if so ordered. A formed **Rear Drop Door** with full length continuous hinge (Model DRD) may be substituted for the rear panel at an extra cost of 5% of the top cabinet. Ventilating formed **Rear Drop Door** (Model VRD) may be substituted at an extra cost of 7½% of the top cabinet.



2 Peaked Desk Top Cabinets #PT-19 with one pair of PTP-19 End Panels and two 610 Front Panels.

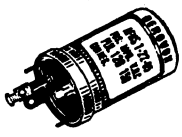
ELECTROLYTICS



TYPE AFH (85°C) TWIST PRONG ELECTROLYTIC CAPACITOR

SINGLES • DUALS • TRIPLES • QUADS

The outstanding line of twist-prong mounting electrolytic capacitors with all the latest refinements — 85°C operation — high purity aluminum foil construction through out — improved moisture resistant seal. Types AFHS-PWHS are specially constructed for high ripple current circuits. PWH and PWHS are constructed for printed wiring board applications.

These units operate over a wide temperature range with a minimum change in capacitance.

While designed for filter audio bypass applications in Radio-TV and Amplifier equipment as exact replacements, many values are rapidly gaining acceptance in industrial applications.

They are manufactured to meet all requirements of EIA specification number RS-154. Capacity tolerances of this specification are listed below.

ELECTROLYTIC CAPACITY TOLERANCES

0-50 Volts	—	—10 +250%
51-350 Volts	—	—10 +100%
351 Volts & Up	—	—10 +50%

Aerovox Corporation is currently working on a size reduction program. Many sizes shown in the following listing reflect latest design figures. However Aerovox reserves the right to furnish previous catalog sizes until present stocks are depleted.

The AFH capacitors listed here include only those ratings which might find usage in in-industrial applications. A complete line of ratings may be found in the latest Aerovox Industrial Catalog, IDC 567, or Servicemen's Catalog, SE-567, and may be requested from Aerovox Corporation, Distributor Sales, or through your nearest authorized Aerovox Industrial Distributor.

Metal Can Tubular Electrolytic Capacitors TYPE PRS-AC (AC rated units) NP-PRS (non-polarized units)

Compact, electrolytic tubular capacitors furnished in aluminum cans with cardboard insulating sleeves. Designed for use in television and radio applications where space is at a premium.
Included in this listing are the AC rated units (PRS-AC) and non-polarized units (NP PRS) for replacement use in cross-over networks and color TV receivers.
Single section capacitors are furnished with bare tinned copper leads 3 inches long. Negative grounded to case. Multiple units are furnished with insulated, stranded copper leads 5 inches long. Negative is common and grounded to case. Multiple units have common cathode.
Sizes listed are diameters over cardboard insulating sleeve. For actual can size deduct 1/16" from diameter and 1/4" from length. Multiple units are supplied with mounting strap. If mounting strap is required on single units, specify on order.
Tolerance and surge voltage are in accordance with EIA Specification RS-154.
The factory is currently in the process of reducing sizes of this type. Aerovox reserves the right to ship sizes listed below until present stock is depleted and smaller sizes as they become available.

Ultra-miniature, tubular, aluminum cased electrolytics with tinned copper leads. Furnished with insulating sleeves of heat shrinkable mylar tubing which adds only 1/32" to can diameter and 1/16" to length.

Ideal for use in bypass, filter, and coupling applications in low-voltage, compact, miniaturized equipments such as personal radios, hearing aids, microphones, wire receivers, etc.

Elimination of variable or high resistance connections, freedom from corrosion and extremely low leakage characteristics have been attained through the use of a combination of all-welded construction, high purity ingredients and extreme care in manufacture and test procedures.

Temperature Range: —30°C to +85°C
Capacitance Tolerance: —10%, +100%
Nominal lead length: 1½"

Packaging: Packaged in new, patented, straight-lead, 5-pack container. Keeps leads straight. Holds five units. The 5-pack is adaptable to packaging in bulk or in single inside cartons. For full technical information request Bulletin NPJ-124

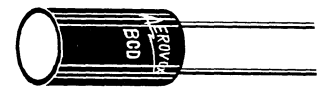
TYPE B C D UPRIGHT MOUNTING BAKELITE CASED ELECTROLYTICS



"Polycap" cased, epoxy end filled electrolytic capacitors. Upright mounting for replacement in printed wiring, transistorized personal radios and car radios.

Small size and type of mounting make these units ideal for use in any printed wiring circuit.

Plastic case and epoxy end seal offer good moisture barrier which protects against drying out or leakage of electrolyte.

High purity foil insures long life and low leakage.

Minimum 1" lead length assists in threading connections into printed wiring boards even in tightest spaces.

Positive lead is identified by a + (plus) mark on case.

ELECTROLYTICS — (Continued)

TYPE QE 61

Type QE capacitors are aluminum electrolytics designed for applications requiring high reliability and long life. Typical applications are in computor equipment, power supplies, telephone networks, industrial electronic equipment and high grade commercial and laboratory test instruments.

These units are manufactured with special high purity materials and processed under controlled conditions of cleanliness with the most modern equipment available. The aluminum container is hermetically sealed and furnished with low screw inserts with a pressure type safety vent provided in the cover.

Operating temperatures for QE61 is —20°C to +65°C. Standard capacity tolerance 2.5 Volts to 150 Volts is —10% +100%. For 151 Volts to 450 Volts —10% +50%. QE61 will be furnished with heat shrinkable mylar tubing which adds only .010 to the diameter and .020 to the length of the can size as shown.

For complete engineering details including ripple currents, dissipation factor, etc., request our latest bulletin NPJ-125.

TYPES HCB and NPB High Capacity Low Voltage Bakelite Cased Electrolytics

Type HCB units are polarized electrolytic capacitors designed for use in industrial applications such as battery eliminators, power supplies, electric fence controls and sound movie projectors. For non-polarized applications in welding and control equipment Type NPB units are available.

Both types feature heavy-duty, moisture resistant bakelite cases which eliminate the need for outer cardboard insulating tubes. Operating temperature range from —40°C to +85°C. Capacitance tolerance up to 150 VDCW —10% +100%, over 150 VDCW —10% +50%. High capacity etched plate construction assures long trouble-free operation. Units supplied with wrap around—footed brackets for vertical mtg.—horizontal mtg. available on Special Order.

AEROFILM® (MYLAR*) CAPACITORS

TYPE V161

V161 Aerofilm Tubular Capacitors are high quality units in Polycap® cases. These units have exceptionally high insulation resistance and low dielectric absorption and power factor. They are extremely stable having a relatively small capacitance change with temperature variations over a range of 0 to 85°C.

Their excellent resistance to humidity and moisture are due to the use of Aerofilm (Aerovox's trade name for Mylar* polyester film), finest quality casing material, and an epoxy end fill which will not flow, soften or melt at any operating temperature. Standard tolerance is ±20% but also available in ±5% and ±10%

CAPACITORS

Type K323Z
Metallized Polycarbonate Capacitors

If plastic sleeve is desired add suffix "P" to type number and specify when ordering. Add 1/16" to the diameter and length and add .02 to cost of unit.

Here is the first stock line of hermetically sealed metallized polycarbonate capacitors. Polycarbonate film offers many advantages over paper or other film dielectrics including high capacitance stability, low dissipation factor, low dielectric absorption and high insulation resistance. Metallized polycarbonate offers the additional feature of self-healing in the rare case of dielectric breakdown. Size and weight savings over paper capacitors are most obvious in lower voltage ratings but the added stability is an important plus at the higher voltages. Operating temperature is -65°C to +125°C at full rating. Standard tolerance is ±20%. Other tolerances available on special order. For full technical information request bulletin NPJ-136.

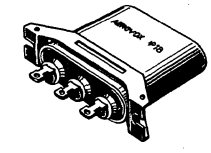
TYPE P16 and P16-CT

Small corrosion and immersion-proof unit for severe atmospheric and climatic conditions. P16-CT is standard; P16 is available in 400 and 600 volts. Operating temperature −55 to +85°C. Dual units have two terminals, case grounded. Standard tolerance +20 − 10%. CP0-91S and CP091F brackets available for P16. Base size 1-5/16 x 11/16. Impregnated with either Hyvol M or Hyvol J.

30 Standard Values - 3 Voltages

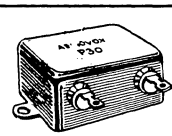


TYPE P18-CB

Similar to P16 in construction and electrical characteristics. Because of the difference in the base size type P18CB can be supplied with three terminals. Dual units are case floating, triples are case grounded. The size difference also makes these units suitable for use in assemblies where P16's do not fit. Operating temperature range −55 to +85°C. Standard tolerance +20 −10%. Impregnated with either Hyvol M or Hyvol J.

37 Standard Values - 3 Voltages

TYPE P30 Bathtub Case



High-quality bypass capacitors furnished in drawn metal bathtub cases, hermetically sealed. These units are Hyvol M or J impregnated for operation at temperatures from −55 to +85°C. They are especially recommended for applications where high reliability and superior performance are required. Typical applications for these rugged units would include marine, aircraft and tropical climates. Standard tolerance +20% − 10%.

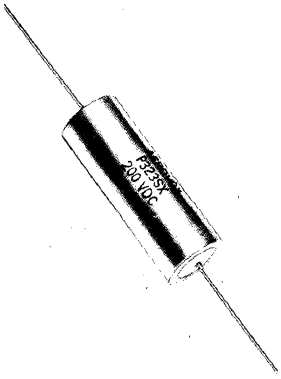
CAPACITORS

TYPES P323S AND P323SX



Tubular, metal-cased units with hermetically sealed construction and glass terminal end seals. Engineered to meet high-temperature, minimum space requirements, Types P323S and P323SX are designed for long life at elevated temperatures.

Impregnated with HYVOL "S", a special high temperature liquid impregnant. These units are capable of withstanding twice rated voltage between terminals or between terminal and case for a 1-minute period. Ambient temperature shall be +25°C, —10°C for this test. Power factor is less than 1% when measured or referred to a frequency of 1,000 cps at 25°C.

Type P323S and P323SX are rigidly processed to assure operation between —65°C and +100°C. Type P323S uses an inserted-tab construction to obtain minimum size, while type P323SX has extended-foil construction for applications at very-low AC voltages.

For equivalent types rated —65°C to +100°C in the same case size as shown, order as P123S, SX etc., and request prices.

Styles available from stock include units bearing suffixes S-SX which are as listed; G types, with one end grounded which are 1/16" shorter; GP types, grounded, with plastic insulating sleeve and 1/16" larger diameter and P types, with both ends insulated and a plastic sleeve, which are 1/16" larger in both length and diameter.

Grounded units to be discontinued when present stocks are depleted.

STYLE VARIATIONS

METALLIZED-PAPER CAPACITORS

TYPE P8292ZN PLASTIC-CASED, METALLIZED-PAPER TUBULARS

Featuring an exclusive "polycap" plastic-case construction, these capacitors offer outstanding resistance to humidity and improved insulation resistance. The high temperature impregnant permits operation over the temperature range of −30° to +100°C at working voltage. Distinctive black cases are completely free of any wax coating to facilitate handling problems in automatic insertion and assembly equipment. Standard tolerance on these units is ±20%. Available in closer tolerances upon request at an additional charge. Mechanical Tolerances— ±1/16" on length and diameter.

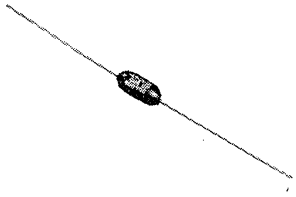
TYPE P95ZN

Micro-Miniature Dipped Metallized Paper Capacitors



Aerovox Type P95ZN capacitors employ an entirely new internal construction concept and utilize a dipped resinous housing to produce remarkably small sizes. The dielectric is a distinct departure from conventional foil paper and previous metallized paper construction. This new and improved metallized dielectric provides both the dielectric and the electrodes. Since capacitance is predetermined mechanically in the initial processing, the human element is eliminated for capacitance control. In addition, the P95ZN offers unusually strong lead connections as the result of an exclusive Aerovox manufacturing process. Leads are hot tin-coated phosphor bronze.

These Aerovox micro-miniature capacitors are especially suited for applications where low capacity units are now being used.

CAPACITORS

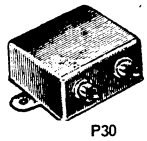
INDUSTRIAL SECTION — MIL TYPES MIL-C-25C



TYPES CP53, CP54, CP55

Hyvol J or H oil impregnated and filled, drawn-metal cased capacitors, immersion proof and hermetically sealed. This unusually compact "bathtub" type capacitor is the most popular of the small units for severe operating conditions. Available with terminals on side (CP53), top (CP54), or bottom (CP55). The standard tolerance on single section units is ±10% (K), on multiple section units +20 —10% (V).

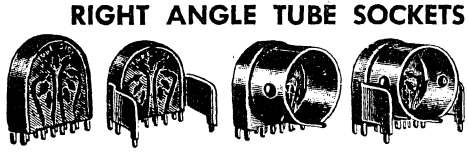
RIGHT ANGLE TUBE SOCKETS



Type A Type AX Type B Type BX

Ordering Example: RA7A = (Type 7 Pin Socket)

Available in 7-pin and 9-pin types in four styles, these sockets are designed to meet existing MIL Specifications. Active contacts are silver plated and non-fatiguing contact pressure provides proper insertion and withdrawal pressure with a minimum of contact resistance. Ideal for hand or mechanical insertion into printed-wiring boards using simple in-line punched round holes. Templates are furnished with each socket. Long terminals permit use of sockets on wide range of board thickness.

Type A — for general purpose applications.
Type AX — for special applications (military and commercial) where extra strength and rigidity are required.
Type B — same as Type A except tube shield shell added.
Type BX — same as Type AX except tube shield shell added.

RA 7 — 7 pin right angle tube socket. RA 9 — 9 pin right angle tube socket

Eyelet Feed-Thru Capacitors

Hi-Q Feed-Thru Capacitors Eyelet Type are the ultimate in miniaturization because of unique design. This design is such that the capacitors can be soldered directly to a chassis and provide excellent bypass performance where space is critical. The low inductance characteristics brought about through the construction of the capacitors make the eyelet type ideal for high frequency bypass.

DIPPED SILVERED MICA CAPACITORS - TYPES ADM-10, ADM-15, ADM-19, ADM-20 AND ADM-30

Aerovox plastic-coated dipped-mica units exceed many of the advantages of molded mica units, and at the same time are smaller than conventional units. Meeting all the applicable MIL-C-5B Test Standards for molded mica capacitors, these unique dipped-mica units offer the following features:

• High operating temperatures —55° to +125°C • Excellent long-life characteristics • Improved temperature coefficient range • Radial leads for automatic insertion and plug-in assemblies • Ideal for printed-wiring assemblies • Unsurpassed performance and stability characteristics • Smaller physical size.

Humidity Resistance: these capacitors shall have an insulation resistance of not less than 2,000 megohms after being subjected to the Humidity Resistance Test as outlined in MIL-C-5B. Minimum Insulation Resistance: 25,000 megohms at 25°C; 1000 meghoms at 125°C.

Capacitors will be marked with capacity and tolerance.

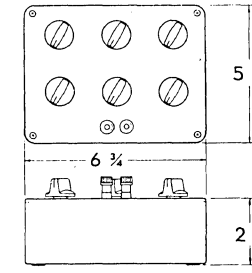
AEROVOX DECADE BOXES

RESISTANCE CAPACITANCE INDUCTANCE

FIGURE B



Aerovox now makes available to the electronic industry laboratory quality standards in capacitance, resistance and inductance decades. From one of the outstanding manufacturers of precision resistors, capacitors and inductors, Aerovox is making available decade boxes of the highest quality in the ranges most needed for electronic and electrical laboratories at a price far below that of equivalent quality standards. Aerovox decade boxes are available in 11 units; 4 resistance decades, 3 capacitance decades and 4 inductance decades.

Ten of the decades are housed in seamless, drawn steel cases coated with gray enamel. They are capable of taking the beating of bench use without impairment of accuracy. The 11th decade box, a new resistance model ARD-41, is housed in a special high impact plastic case which will also withstand rugged handling.

This new decade box has a range of 0 to 1.1 megohms in 1 ohm steps, combining all the three other resistance decades into one compact box. Outline drawings of both sizes are shown. All panels are black with the marking engraved in white.

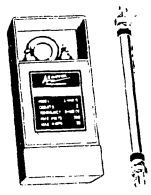
FILTERS

SCREEN ROOM FILTERS



Screen room filters comply with rigid specifications set up by the designers of the most advanced type screen rooms. All have attenuation equal to or exceeding that of the screen room. Easy mounting arrangements plus high attenuation assure you of the finest equipment specially designed for screen room use. These filters are hermetically sealed and terminals at both ends are shielded using knock-outs for ¾" and 1" conduit.

1¼" diameter mounting hole on all cases is countersunk to permit flush mounting of the filter on the screen room.

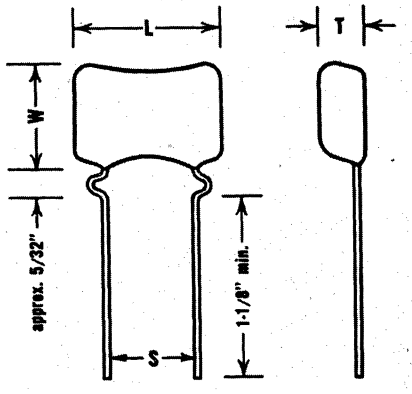
Dur-Mica leads may be either tinned brass or tinned copper-clad steel, 30% minimum conductivity, except the following which are copper-clad steel only:

DM-10, DM-42, and DM-43.
DM-19 and DM-20 — 3000 mmf. and above.
DM-30 — 10,000 mmf. and above.

Crimped Leads

In addition to the straight lead design, DM capacitors are also available with crimped leads for printed circuit application. The crimp provides a positive stop when capacitors are mounted. This prevents interference of resin coat on the leads with dip-solder operation, provides greater mounting uniformity, and elevates the components slightly above the surface of the board. The crimp lead design is not a regularly stocked item, but it is available to special order at a small fixed handling charge.



Lead wire gage for crimped lead units is the same as for straight lead capacitors with the exception of DM-15 and DM-16. Crimped lead gage of DM-15 and DM-16 is #20. The DM-10 case size is not available with crimped leads.

Maximum Dimensions

The following is a tabulation of maximum dimensions of the various DM case sizes. They have been specified to anticipate variations in coat thickness and minor protrusions on the surface. As a result, average dimensions of a given lot may be appreciably smaller than those listed.

It is to be noted that the leads are not centered in the thickness dimension as can be seen on the end view dimensional drawing. Construction of Elmenco Dur-Mica capacitors provides for leads to project from one surface of the mica stack, causing them in turn to extend from one edge of the capacitor. Regardless of case size and overall thickness, leads will always be within 1/64 to 3/32 from one of the capacitor surfaces. (Exclude SCDM).

Not all dimensions of every capacitance value are listed below. It has been found that size varies almost linearly with capacitance value. As a result, dimensions of values between those specified below should be determined by interpolation.

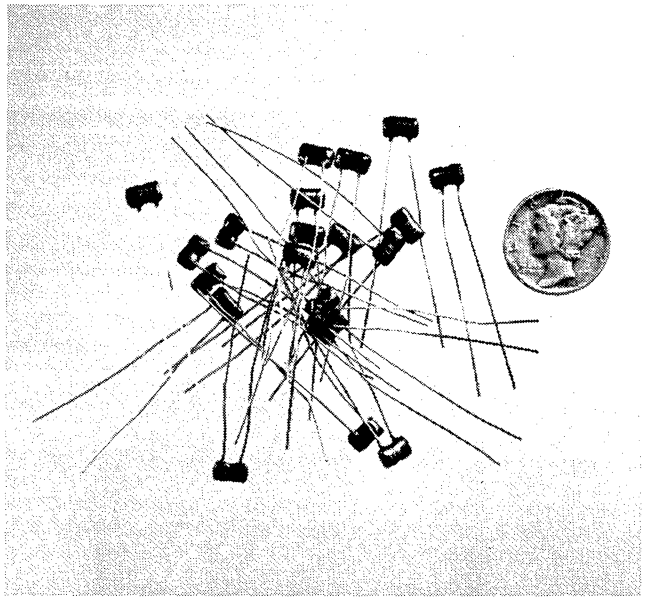
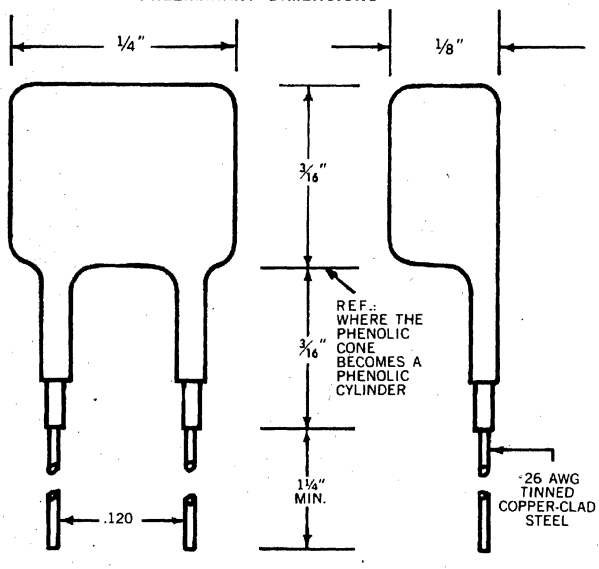
ELMENCO CAPACITORS — DM5 Miniature Dur-Mica



The new ELMENCO DM5 dipped silvered mica capacitor has been designed to keep pace with the ever-shrinking world of electronic circuitry. Significant volumetric savings are achieved in the lower values of capacitance through two principle changes in design. First, the area of each mica film has been reduced to get a better balance of area vs. thickness of capacitive section. This automatically resulted in further saving through redesign of other structural members to get more capacitance per cubic inch. Second, a newly developed dip-coat material is employed which imparts improved environmental protection with a far thinner coat than found on the larger mica capacitors of the ELMENCO line. The result is a much smaller capacitor in the 1 through 198 pf. range with the same reliability and high quality performance the industry has come to expect from ELMENCO mica capacitors.

DM5 capacitors have a standard voltage rating of 300 VDCW except for the highest values which are 100V and 50V ratings as indicated in the tabulation below. Electrical and environmental specifications are basically the same as for the other ELMENCO dipped mica capacitor styles. The capacitors are stamped with capacitance value in pf. followed by a letter signifying capacitance tolerance. For example, 27K would be 27 pf. ±10%; 150G would be 150 pf. ±2%. In the lower values, standard minimum tolerance is ±1 pf., but for an added charge we can produce ±0.5 pf. or even ±0.25 pf. capacitors.

PRELIMINARY DIMENSIONS



The preliminary dimensions indicated above represent the expected maximum limits for the largest DM5 capacitors. At this printing the analysis of dimensions vs. capacitance for all values and voltages had not yet been completed. Due to the variation in size of capacitive section with value, dimensions will vary 30 to 40 mils between 1 and 180 pf. Final tabulation of case size dimensions in mils will be published in the next ARCO catalog similar to tabulations now shown for established case sizes. The lead spacing and specifications will not change.

NOTES ON DUR-MICA CAPACITORS

Case sizes DM-16 and DM-43 (see page 10 for dimensions and capacitance ranges) are available to special order. Price and delivery information upon request.

All capacitances marked * are 300VDCW.

All capacitances marked ** are 100VDCW.

§ Minimum tolerance ±1 pf. For ±0.5 pf. add 50% to listed price.

† Minimum tolerance ±0.5 pf.

‡ Tolerance letter designation in part number.

All values available in ±½% tolerance if needed. Prices upon request.

All ELMENCO mica capacitors are manufactured to meet applicable MIL-C-5 specifications. The corresponding MIL designation is indicated next to each case size heading. The DM-19 (CM06), DM-30 (CM07), and DM-42 (CM08) capacitors are universally marked so that material shipped will automatically meet MIL-C-5 marking provisions. On DM-10 (CM04) and DM-15 (CM05) case sizes, the capacitors supplied are identical whether the ELMENCO or MIL part number is specified with the exception of marking. When the MIL part number is specified, MIL Type Designation must appear on the capacitor.

For capacitance values within the ranges specified for each case size but not listed, there is a $1.50 set-up charge per item. For the base price, use the next higher standard listed capacitance value.

For the "P" or 150°C. operating temperature requirement, add $0.10 to the indicated net price, then add an additional 20%.

SPACE-SAVER
TYPE SCDM THIN COAT DIPPED MICA CAPACITORS
(ELMENCO TYPE 1CR)

In applications requiring the high performance characteristics of dipped mica capacitors where space is at a premium, the Type SCDM reduced coat ELMENCO capacitors may often be used to advantage. A single protective resin coat is applied instead of the full series of dips incorporated in the standard unit. The amount of coat material is thereby reduced to a minimum consistent with good design, and a significant reduction of all dimensions is achieved.

All electrical and environmental requirements of MIL-C-5 are retained with the exception of case insulation (3.5.3) and moisture resistance (3.14). A maximum voltage stress of 100VDC through the case insulation is recommended for SCDM units. Although some lots of this type capacitor will not meet stringent MIL moisture resistance specifications, all will meet the humidity requirements of Paragraph 2.3.6 of EIA Standard RS-153. Therefore, the SCDM capacitors will operate with satisfaction where they will not be exposed to extensive periods of high humidity. It is recommended that if these capacitors are destined for operation under extreme environmental conditions, they should be given additional moisture protection such as encapsulation or hermetic sealing of the assembly.

TYPES SCDM10, SCDM15, and SCDM19 capacitors are stocked in depth at ARCO regional facilities in all values. They may be obtained within 24 hours from your local ARCO distributor. See standard DM tabulations on preceding pages for values and pricing.

ELMENCO CAPACITORS — High Voltage Dur-Mica

A new line of ELMENCO Silvered Hi-Voltage Dur-Mica capacitors is now available to complement the similar values in the molded configuration. These high voltage capacitors afford the same facility of use in low power applications by providing reliable operation in a small case size. Elmenco Dur-Mica capacitors may be substituted for similarly rated molded units normally supplied in the larger CM45, CM50, CM55, and CM60 case sizes.

The Dur-Mica design provides advantage of higher temperature operation (125°C. max.); radial leads for printed circuit application; higher capacitance in a given case size; and improved reliability. The dipped units, being solidly impregnated with corona resistant material, do not have the voids which make molded types susceptible to corona. As a result, the dipped capacitors can be supplied with voltage rating as high as 5000VDCW.

All Elmenco Dur-Mica capacitors are silvered mica construction. They conform to electrical and environmental specifications set forth in MIL-C-5 specifications.

The physical configuration of these capacitors is the same as for the standard DM units. This information is found on page 8. The only difference is that for a given capacitance value case dimensions will be larger for higher voltage ratings because the mica is thicker. The maximum case dimensions for each of the case sizes indicated below is the same as the maximums indicated in the tabulation.

Capacities from 100 to 2400 mmf. can be supplied in CM-19 cases. In values above 1000 mmf. the list prices for CM-19 are 10% higher than those listed above.

As can be seen in the line drawing above, the only difference between CM19 and CM20 is length dimension. For competitive reasons it has been necessary to retain both mold sizes. However both CM19 and CM20 fully conform to all specifications for MIL-C-5 case size CM20, and they are interchangeable for military requirements.

TYPE VCM
HIGH VOLTAGE MOLDED MICA

ELMENCO molded mica capacitors are available in voltage ratings up to 2500VDCW. These capacitors meet all electrical and environmental requirements met by the standard units with the exception that they are designed to operate reliably at higher voltage stress levels. The following is a tabulation of case sizes, voltage ratings, and capacitance ranges available:

VCM-20

Voltage Rating (D.C.)	Capacitance Range (pf.)

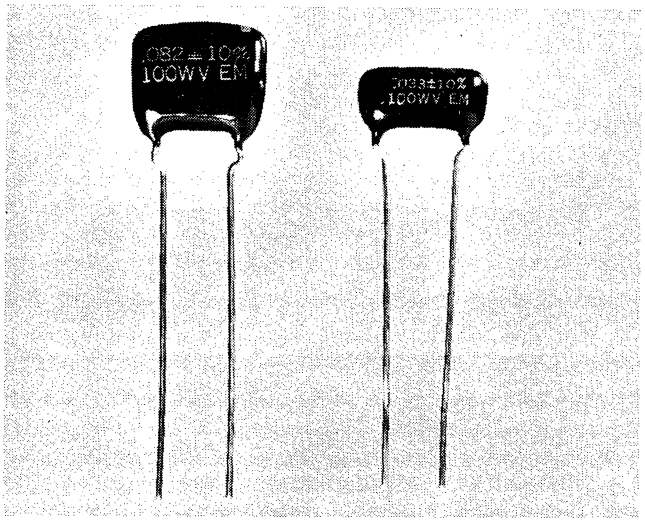
ELMENCO CAPACITORS — Epoxy-dipped Flat Mylar



The new ELMENCO Type MDF capactor is a mylar dielectric unit dipped in a newly formulated epoxy material and shaped in the flat configuration particularly suited to saving space on printed circuit boards. Before being brought to market, the design has been carefully evaluated for more than two years to be sure that the performance of the MDF will be of a level expected of ELMENCO capacitors. This release covers the 100VDCW rated series only. Dipped mylar capacitors with other voltage ratings will be announced shortly.

The specifications for the ELMENCO Type MDF are as follows:

Voltage Rating: 100VDCW, 250VDCT.

Insulation Resistance: 20,000 megohm-microfarads or 100,000 ohms, whichever is less, at 25°C.

At 85°C., the figures are 300 megohm-microfarads or 1500 megohms minimum; at 125°C., 20 and 100 respectively.

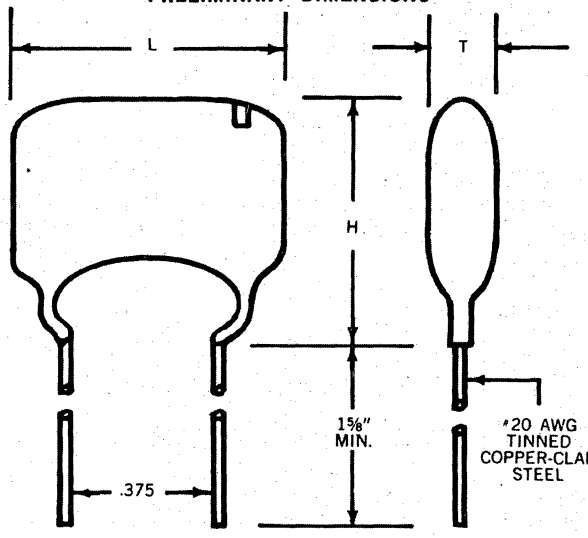
Maximum power factor at 1 kc.: 0.6%

Maximum cap. change from room temperature:

−7% at −55°C.
−3.5% at −30°C.
+4% at 85°C.
+17% at 125°C.

Capacitance drift: ±1% maximum.

PRELIMINARY DIMENSIONS



These preliminary dimensions are established maximums for the four basic configurations of Type MDF. When dimensional surveys are completed on production representative of all values, individual dimensional information for each capacitance value will be published as for other dipped ELMENCO capacitors. Dimensions, particularly thickness, will vary with capacitance value.

Cap. value (mfd.)	L max.	H max.	T max.

.034 - .068	.800	5/8	1/4

ELMENCO CAPACITORS

DIPPED TUBULARS

MYLAR* and MYLAR-PAPER

* Reg. DuPont Trademark

ELMENCO dipped mylar and mylar-paper capacitors represent a double break-through in capacitor design. They combine missile and computer quality with commercial radio-TV cost. A recent development is the addition of precision dipped tubular capacitors in tolerances as low as ±1% in addition to the popular ±10% general purpose unit. The only difference between the general purpose "dp" series and the industrial precision capacitors lies in the extra stabilizing processes applied to close tolerance capacitors to insure retention of accuracy in the field under operating extremes.

Elmenco Type MPD capacitors are non-inductively wound and vacuum dipped to obtain solid impregnation and a rugged, moisture-proof coat. New fabricating techniques realize the full potential of the dielectric materials utilizing most of the low-cost procedures of the exclusive Elmenco dip-coat process. The result is a product of electrical excellence with high reliability in operation at 125°C. without derating. The specifications listed on this and following pages well-illustrate the inherent quality of these capacitors.

NOTE: The 100VDCW rated dp units are pure mylar* dielectric capacitors.

ELMENCO CAPACITORS

Variable Compression Mica TRIMMERS

Elmenco Trimming Condensers are treated for resistance to humidity and for permanence of capacity setting.

The base is made of the lowest dielectric loss ceramic material available and the mica is clear India Ruby.

The soldering lugs may be bent in any position without affecting capacity setting due to the rigid construction of adjusting plates.

Trimmers shown here are standard sizes and capacities.

Voltage 350 VDCT — 175 VDCW.

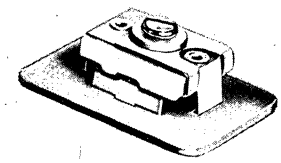
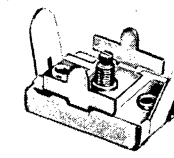
TYPE PC — PRINTED CIRCUIT TRIMMERS





The Elmenco Trimmer capacitors, Types 40, 42, and 46, have been adapted for printed circuit techniques through alteration of terminals and mounting configuration. The holes in the terminal lugs are removed since necessity for hook-up is eliminated. The resulting solid terminals have greatly increased spring action, allowing the trimmer to be "snapped in" the printed circuit board and firmly held until solderd. The mounting lug portion of the trimmer has also been modified to facilitate positioning and support of the unit. Drawings of the trippers and mounting layout are available upon request at no charge.

This printed circuit style is identified by the prefix letters "PC" preceding the regular part number. All listed values are available in the PC style.

For list price add $0.05, for net price add $0.03, to the respective prices of the standard trimmer.

LORCAPS CERAMIC DISC

GENERAL INFORMATION

Arco ceramic disc capacitors exhibit a level of performance and reliability consistent with conservative design technique inherent in all Arco components. Higher voltage ratings improve reliability manyfold and provide extra reserve for resistance to surges and temporary overloads. Rugged phenolic coating and high temperature wax impregnation give superior moisture resistance and physical strength. Arco ceramic discs have been designed to minimum size obtainable with complete retention of original specifications while operating in the field. For originai equipment or for replacement, Arco ceramic disc capacitors may be used with confidence.

MINIATURE GENERAL PURPOSE

Arco Type CCD ceramic disc capacitors have improved ceramic bodies which impart longer life and greater stability to any application. The standard CCD line has a ±10% tolerance and 1000VDCW rating, making possible a single ceramic disc stock for universal use. Whether a broad coupling or by-pass application, or a critical close tolerance use, Arco CCD units fill the bill with dependability and economy. The "space-saving" size of Arco discs is another feature designed to offer greater service convenience with complete safety of operation. In addition to the 1000VDCW line, higher voltage ratings are available in Type CCD units. 3000-VDCW (Type 3CCD) and 6000VDCW (Type 6CCD) disc ceramics are supplied in tolerance of ±20%.

TEMPERATURE STABLE

This new ARCO ceramic capacitor maintains excellent capacitance stability with wide temperature variation. The graph illustrates typical percentage variation of capacity value with temperature. The operating temperature range has been extended to −55°C. to +125°C, without derating of the 1000VDCW specification. Standard tolerance is ±10%. The combined small size, low cost, and high stability represents another significant advance in the quality line of ARCO capacitors. All units are marked "TS" for identification.

TEMPERATURE COMPENSATING

TYPE CCTO

Arco Type CCTO ceramic disc capacitors are zero temperature coefficient units specifically suited for high stability, high Q application. In addition to extreme temperature stability, Type CCTO capacitors have very high insulation resistance and low aging rate. These special characteristics are added to the high 1000VDCW rating and close tolerance of the entire Arco ceramic line to provide a superior capacitor for the special purpose intended. Type CCTO capacitors are identified by "NPO" printed on each unit.

TYPE CCTN

Another member of the Arco temperature compensating disc ceramic line is the Type CCTN unit which has a negative temperature coefficient of −750 ppm/°C. (N750). These units are used to counterbalance shifts in other circuit components with change in temperature. The result is a more stable circuit essential to many frequency control applications. Improved ceramic bodies in the temperature compensating line provide greater long term stability in addition to accurate temperature compensation. Type CCTN capacitors are identified by "N750" imprinted on each unit except the smallest size. On the small units the E.I.A. temperature coefficient designation "U2" is imprinted.

ARCOLYTIC CAPACITORS

Miniature Aluminum Electrolytics Type ME

Type ME Miniature Aluminum-cased Electrolytics are the latest addition to the Arcolytic capacitor line. They use the same high purity (99.99%) etched aluminum foil as the standard size Arcolytics. The design of the Type ME is particularly adapted to the latest transistorized circuitry which features low voltages and compactness of structure.

Type ME capacitors have an all-welded construction which provides increased ruggedness and resistance to environmental extremes. Corrosion and electrolyte leakage are eliminated. Electrically, they exhibit extremely low leakage current and maintain extended shelf life without deterioration. All units are insulated with a transparent plastic sleeve permanently bonded to the aluminum body.

SPECIFICATIONS:

CAPACITANCE AND TOLERANCE:

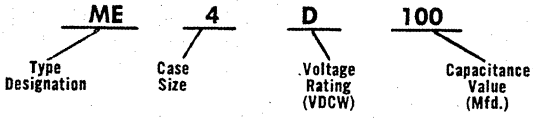
Capacitance measurements are made at 120 cycles per second and 25°C. Capacitance tolerance is −10%, +100%.

OPERATING TEMPERATURE RANGE: −30 to 85°C.

D.C. LEAKAGE CURRENT: Maximum leakage current is 5 microamperes or .03VC, whichever is greater, where V is D.C. voltage applied and C is capacitance in microfarads.

LEADS: Axial, 1½" length minimum, #20 tinned copper.

NOMENCLATURE: The part numbers for each Type ME incorporate case size, voltage, and capacitance value:



The example specifies a 100 mfd. 12V capacitor, case size ⅜" x ¾".

VOLTAGE RATINGS: The following table indicates letter designations assigned to the various voltages in which Type ME capacitors are supplied:

Why do we wind all our tv-replacement capacitors with computer-grade 99.99% pure aluminum foil?

To help cure that pain in your neck.

Impurities in aluminum foil can lead to deterioration, premature failures, lost customer confidence — and call-back time you can't charge for. Big pains in the neck.

So we wind every Arcolytic® electrolytic capacitor with the purest aluminum foil available: 99.99% pure. It meets computer manufacturer standards. And exceeds those of radio-tv manufacturers.

Result: Arcolytic capacitors last longer in your customer's set. In fact, they won't deteriorate even at high operating temperatures of 85° C.

And while we wind them with computer-grade foil, we price them for home-entertainment service. You pay no premium.

You'll find whatever discrete capacitance value you need at your LDP Distributor's. And in your choice of single- and multiple-section tubular, or twist-mount designs. (You'll also find a complete line of equivalent-quality miniature ceramic disc capacitors up to 6000 VDCW.)

Start using Arcolytic capacitors. And the next call from your customer will be because he likes your kind of reliability, and wants more of your service.

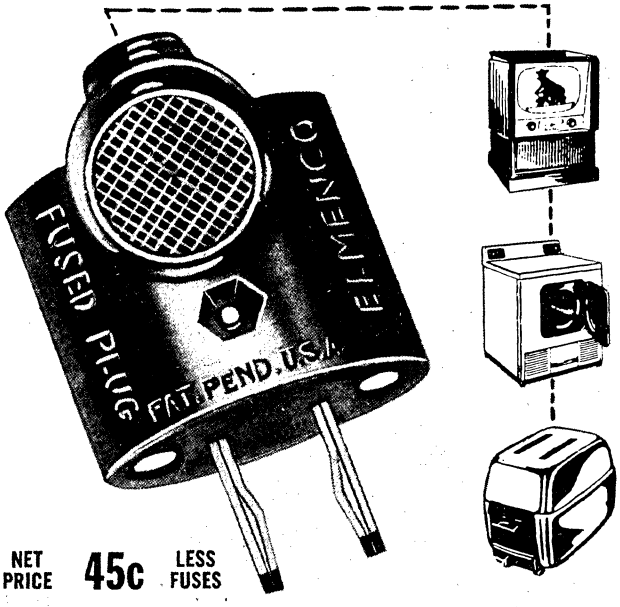
FUSED PLUG

PROTECTS ALL ELECTRICAL APPLIANCES

Offers complete protection against current surges & short circuits

REDUCES FIRE HAZARDS



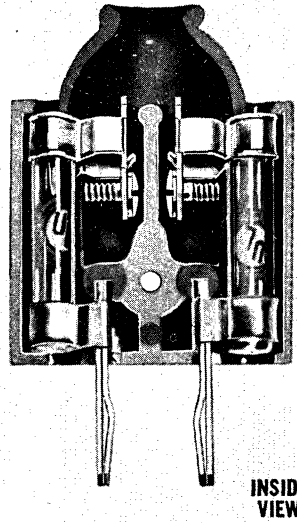
The Elmenco Fused Plug is like any standard plug, is light in weight, but easier to handle because of finger grips. However, it employs 2 small fuses which provide complete protection against damage to the appliance and to the main line. The blown fuse is easy to remove and simple to replace. Fits any standard wall outlet.

NEW MARKETS! GREATER VALUE!

Approved by Underwriters Laboratories and used by many of the largest manufacturers of radio and electronic equipment, battery chargers, washing machines, curling irons, lighting equipment, automatic relay equipment, motors of every description, and practically every other type of product that consumes electricity. Every wired home, office and store is a prospect.

IMPACT RESISTANT COVER
plus SPRING ACTION for positive contact

New spring action design of the male blades assures 100% positive contact regardless of worn condition of wall outlet.



Fuses are replaced instantly without need of opening plug. Can be used with standard 3AG and 3AB glass tubular fuses up to 20 amps.

REPLACE FUSE INSTANTLY!

Conveniently packed 10 to a Box in colorful self-merchandising displays. Easy to handle for resale.

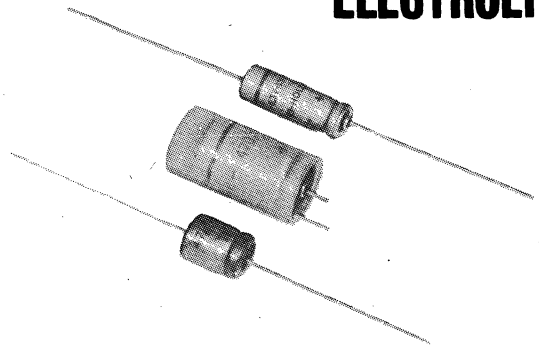
Amperex Capacitors

ELECTROLYTIC CAPACITORS



Amperex high quality, low cost electrolytic capacitors feature small size, high capacitance and long service life. Low leakage currents are achieved through the use of highly purified materials and carefully controlled manufacturing processes. They are the "dry" type with the liquid electrolyte absorbed into a layer of paper between cathode and anode foils. Winding is sealed in an aluminum can.

They are designed to operate at varied efficiences over a temperature range of −40°C to +85°C. The min. and max. temp. depends on the application; increase of impedance and losses are the limiting factors.

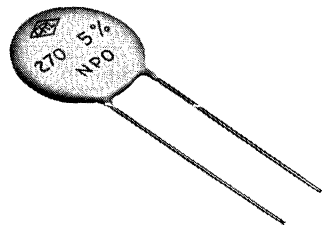
Type DTN, DTZ



Because of the inherent stability of T.C. ceramic dielectric material and smaller size, Centralab DTN and DTZ find many applications in frequency determining and resonant circuits—BETTER THAN MICA FOR ALL APPLICATIONS.

HOW TO PARALLEL TCZ AND TCN UNITS TO OBTAIN A DESIRED CAPACITY AND TEMPERATURE COEFFICIENT VALUE

By using the proper TCZ and TCN units in parallel, a great variety of intermediate capacities and temperature coefficients are obtainable. Follow this simple formula:

1. Desired capacity is .....(pf).
2. Desired temperature coefficient is.....
   Example: enter 330 for N330.
3. Multiply figure of line 1 by figure of line 2.
4. Divide the answer obtained (line 3) by 750. This gives you the value in (pf), of the TCN capacitor required. (For practical purposes, choose a standard unit of the nearest capacitance.)
5. Subtract your result obtained in line 4, in mmf. (using the standard capacitance value you have selected) from line 1. The result will be the required TCZ capacitor, in (pf). Select nearest TCZ value.
   Typical example: 560pF, N470TC:
   a. 560 (pF) × 470(N470) = 263,200.
   b. 263,200 ÷ 750(N750) = 351 (Use TCN-360) 360pF, N750 as one unit.
   c. Subtract 360pF from desired value of 560pF = 200pF (Use TCZ 200) 200pF, NPO as the other parallel unit.
   d. Paralleling TCN-360 and TCZ-200 = 560pF, N470.

CERAMIC TRANSMITTING CAPACITORS

Centralab's transmitting capacitors are designed primarily for transmitters, induction heaters, electronic welding equipment, x-ray, diathermy and other high voltage, high frequency circuits. These capacitors have extremely low power factor and stable retrace characteristics. Long leakage paths and rugged mechanical construction are afforded by the "double cup" design. Current ratings are listed for each unit.

CORNING® FIXED GLASS CAPACITORS

For coupling, decoupling, filtering, timing, switching or computer circuits, CORNING Capacitors provide ultra-stable electrical performance. This stability is inherent in their fused glass and aluminum foil capacitive elements. These inorganic materials and continuous process and quality monitoring are responsible for the well-known CORNING CYFR capacitor made for the Minuteman. Many of the basic advantages of the CYFR have found their way into standard CORNING Capacitors. The properties of these capacitors are entirely those of the closely controlled dielectric, and can't be changed by assembly methods or subsequent treatment. At 1 Kc and 25°C, dissipation factor is less than 0.001; at any given temperature, TC will not deviate from the curve by more than 5 ppm on CYFR, CYFM and TYO units.

Corning manufactures highly stable fixed glass capacitors to meet your demanding circuit requirements. Their performance and economic advantages will add value to your equipment.

APC capacitors are available in three basic groups. The original APC group is furnished with a hex collar on a slotted shaft as indicated in the drawing. The APC-"B" group is furnished with 1/4" diameter shafts to permit adjustment of the capacitance with a front panel knob. The APC-"C" group is supplied with slotted shafts for variation of the capacitance and a 5/16" hex locknut to prevent movement of the rotor in equipment subjected to high levels of vibration or shock.

MAPC

FEATURES—The MAPC series is similar to the APC series of capacitors in that identical materials and assembly methods are employed. The silicone treated steatite bases and all brass nickel plated metal parts with exception of the phosphor bronze rotor wiper assure the same type of reliable performance that the APC series provides.

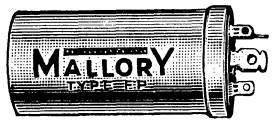
MALLORY Dry Electrolytic Capacitors

METAL CAN ELECTROLYTIC CAPACITORS



FP-WP capacitors are designed for 85° C operation, and have standard twist-prong mounting lugs with solder terminals. PFP-PWP types use standard EIA printed circuit terminals and can be used in place of normal solder terminal types. FPS is special mounting for auto radios. FP-WP types may be adapted to printed circuit mounting by using an **FPA Adapter Kit** (Net Each, **27c**). All types use "etched cathode" construction for hum-free operation, and have an exclusive vent and seal design. Standard tolerance: Up to 50 WVDC, −10% to +150%; 51 to 350 WVDC, −10% to +100%; 351 WVDC and up, −10% to +50%.

"SNAP-CAP" CARDBOARD TUBULAR ELECTROLYTICS

"Snap-Cap" capacitors are made to the same specifications as the "W" series and are supplied with an exclusive mounting ring which allows them to be snapped into a standard BP4 or MP4 mounting plate. Lugs hold securely and won't shake or vibrate loose, yet capacitors are easily removed if required. Furnished with color-coded insulated wire leads with stripped and tinned ends; wires 5″ long. Used in equipment where temperature does not exceed 65° C. **Tolerance:** −10%, +100%.

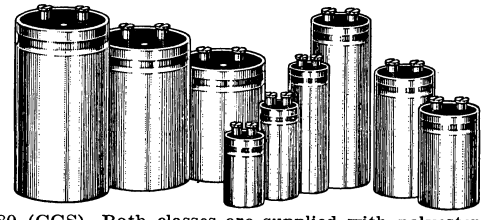
MALLORY Computer Grade Capacitors



Two classes of Computer Grade Capacitors are available: CGS for 65° C operation and CG for 85° C operation. Operating life of both types should exceed 10 years when used within stated parameters. Derating voltage and/or lowering operating temperature will extend life by a large factor. **Temp. Range:** −20° C to +65° (CGS), +85° (CG). **Tolerance:** 0–150 WVDC, −10 +75% (U); 151 WVDC up, −10 +50% (T). For complete specifications, ask for Form 4-64 (CG), 4-80 (CGS). Both classes are supplied with polyester film insulating sleeves and have "High-post" terminals with #10-32 screws. Physical mounting of these capacitors is usually done with VR clamps shown below. The clamps, however, are not included with the capacitors. Order separately.

MALLORY Tantalum Capacitors

MIL-C-3965 CL64/65 MINIATURE METAL CASE WET-SLUG TANTALUM CAPACITORS (TLS)

Mallory CL64/65 (TLS) sintered anode tantalums have flangeless case, ideal for high density packaging. Completely replaces the older CL44/45 MIL type. Type CL64 exhibits very high performance and very low DCL. Supplied in two temperature grades: −55° C to +85° C and −55° C to +125° C. Tolerances: ±10% **(K)**, ±20% **(M)**, −15% +30% **(S)** and −15% +50% **(T)**. Types listed are in plain, uninsulated case; for insulating sleeve, specify CL65 and add **5c** to prices shown. **Complete specs in bulletin 9-351.**

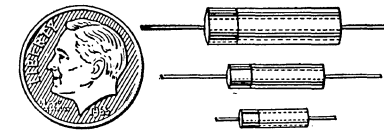
MTP/MTPH ULTRA-MINIATURE TANTALUM CAPACITORS



Mallory MTP/MTPH capacitors provide the greatest capacity-voltage product of any tantalum type. Sintered anodes are housed in special silver cases with elastomer end seal, and are completely insulated. MTPH types are manufactured to rigid "Minuteman II" standards with zero failures in 3.7 million unit-hours of testing. Type MTP is the commercial equivalent. Operating Temp.: −50° C to +85° C. Tolerance: ±20%. DCL is extremely low. **See bulletin 4-70 for details.**
